NZD - RBNZ Interest Rate Decision

NZD - RBNZ Interest Rate Decision

Event	NZD - RBNZ Interest Rate Decision			Description
Actual:				The Reserve Bank of New Zealand (RBNZ) governor decides where to set the rate after consulting senior bank staff and external advisers. As short term interest rates are an important determinant of currency valuation, traders watch interest rate changes closely. A reading that is stronger than forecast is generally supportive (bullish) for the NZD, while a weaker than forecast reading is generally negative (bearish) for the NZD. Learn More: NZDJPY NZDUSD

USD - Crude Oil Inventories

USD - Crude Oil Inventories

Event	USD - Crude Oil Inventories			Description
Actual:				The Energy Information Administration's (EIA) Crude Oil Inventories measures the weekly change in the number of barrels of commercial crude oil held by US firms. The level of inventories influences the price of petroleum products, which can have an impact on inflation. If the increase in crude inventories is more than expected, it implies weaker demand and is bearish for crude prices. The same can be said if a decline in inventories is less than expected. If the increase in crude is less than expected, it implies greater demand and is bullish for crude prices. The same can be said if a decline in inventories is more than expected. USD - FOMC Meeting Minutes

USD - FOMC Meeting Minutes

Event	USD - FOMC Meeting Minutes			Description
Actual:				The Federal Open Market Committee (FOMC) Meeting Minutes are a detailed record of the committee's policy-setting meeting held about three weeks earlier. The minutes offer detailed insights regarding the FOMC's stance on monetary policy, so currency traders carefully examine them for clues regarding the outcome of future interest rate decisions. USD - Core CPI (MoM) (Mar)

USD - CPI (YoY) (Mar)

Event	USD - Core CPI (MoM) (Mar)			Description
Actual:				The Core Consumer Price Index (CPI) measures the changes in the price of goods and services, excluding food and energy. The Central bank pays very close attention to this figure in its role of maintaining price stability. Because the Fed believes that core inflation is a better gauge of underlying price pressures, it is more closely watched than overall inflation which tends to be more volatile. A reading that is stronger than forecast is generally supportive (bullish) for the USD, while a weaker than forecast reading is generally negative (bearish) for the USD. Learn More: USDJPY EURUSD

USD- 30-Year Bond Auction

USD- 30-Year Bond Auction

Event	USD- 30-Year Bond Auction			Description
Actual:				The figures displayed in the calendar represent the yield on the Treasury Bond auctioned. U.S. Treasury Bonds have maturities from ten up to 30 years. Governments issue treasuries to borrow money to cover the gap between the amount they receive in taxes and the amount they spend to refinance existing debt and/or to raise capital. The rate on a Treasury Bond represents the return an investor will receive by holding the bond for its entire duration. All bidders receive the same rate at the highest accepted bid. Yield fluctuations should be monitored closely as an indicator of the government debt situation. Investors compare the average rate at auction to the rate at previous auctions of the same security. GBP - GDP (MoM) (Feb)

GBP - GDP (MoM) (Feb)

Event	GBP - GDP (MoM) (Feb)			Description
Actual:				Gross Domestic Product (GDP) measures the annualized change in the inflation-adjusted value of all goods and services produced by the economy. It is the broadest measure of economic activity and the primary indicator of the economy's health. A higher than expected reading should be taken as positive/bullish for the GBP, while a lower than expected reading should be taken as negative/bearish for the GBP. Learn More: GBPJPY GBPUSD

EUR - German CPI (MoM) (Mar)

EUR - German CPI (MoM) (Mar)

Event	EUR - German CPI (MoM) (Mar)			Description
Actual:				The Consumer Price Index (CPI) measures the change in the prices of goods and services from the perspective of the consumer. As Germany has the largest output of any country in the euro-zone, the European Central bank pays very close attention to this figure in its role of maintaining price stability. A reading that is stronger than forecast is generally supportive (bullish) for the EUR, while a weaker than forecast reading is generally negative (bearish) for the EUR. Learn More: EURJPY EURUSD

Event	USD - PPI (MoM) (Mar)			Description
Actual:				
Forecast:	-			
Previous:	0.0%			
Time (GMT):	12:30			
Release Date	Actual	Forecast	Previous	The Producer Price Index (PPI) measures a change in input prices of raw, semi-finished or finished goods and services. If input costs rise, some will be absorbed by the producer and some passed on to the consumer. Conversely, if input costs fall, some of the decline will be enjoyed as wider profit margins by the producer and some will be passed on to the consumer in the form of lower prices. Because PPI impacts consumer prices, it is watched by central bankers as part of fulfilling their mandate of price stability. A reading that is stronger than forecast is generally supportive (bullish) for the USD, while a weaker than forecast reading is generally negative (bearish) for the USD. Learn More: USDJPY EURUSD

Quantwater Tech Investments Data Release Deck – 07th April 2025

This document is for informational purposes only and does not constitute investment advice, an offer, or a solicitation to buy or sell any securities or financial instruments.

Past performance is not indicative of future results. Investments involve inherent risks, including the possible loss of principal. No representation or warranty, express or implied, is made regarding the accuracy, completeness, or reliability of the information contained herein.

The information in this presentation is derived from publicly available sources and internal analysis as of the date indicated and is subject to change without notice. Quantwater Tech Investments and its affiliates do not undertake any obligation to update or revise this material.

Neither Quantwater Tech Investments nor any of its affiliates, officers, or employees shall be liable for any direct or indirect losses arising from the use of this information. Any misrepresentation is strictly prohibited.

Key Economic & Analytical Concepts

Economic Data Interpretation

- **Forecast Vs. Actual:** Comparing predicted values with released data
- **Previous Reading:** Last reported value, used as a benchmark
- **Market Impact:** How releases affect financial markets

Average True Range (ATR)

- **Definition:** A technical indicator that measures market volatility
- **Calculations:**
 - Calculate True Range (TR) for each period:
 - $TR = \max [(high - low), abs(high - previous\ close), abs(low - previous\ close)]$
 - $ATR = \text{Simple moving average of TR over N periods (typically 14)}$
- **Interpretation:**
 - Higher ATR = Higher Volatility
 - Lower ATR = Lower Volatility
- **Usage in Our Analysis:**
 - Helps standardize price movements across different market conditions
 - Forms the basis of our Volatility Unit Calculations

Volatility Unit

- **Formula:** $(ATR * multiple) + Spread$ (multiple is typically 1.5)
- **Purpose:** Standardizes price movements

Price Movements

- **Max Movement:** Largest upward price move after event
- **Min Movement:** Largest downward price move after event
- Both measured in Volatility Units

Using This Analysis

- Analyzing volatility across different economic releases helps identify patterns in market reactions.
- This approach allows for evaluating the significance of economic indicators based on their market impact.
- Adhering to standard trading guidelines, the risk amount should not exceed 5% of the trading balance. A risk-reward ratio of 1.4x–6x, guided by the win ratio and historical data from this presentation or other estimates, can be used to determine the appropriate risk level, take-profit point, and position size.
- Trade automation on the MT5 platform can be implemented using the expert advisor linked below, which takes the specified parameters as input.
- **Example:**
 - Volatility analysis of economic releases, such as the Non-Farm Payroll (NFP) event, helps identify patterns in market reactions. For instance, if the NFP event typically results in a minimum movement of 0.5x and a maximum movement of 3x, a stop-loss of 1x and a take-profit of 3x can be strategically applied.
 - Following prudent risk management, the risk per trade should not exceed 5% of the trading balance, typically. For a \$100,000 trading account (max loss amount post which trading is halted), this translates to a max stop-loss of \$5,000 and a max take-profit of \$15,000.
 - The guiding principle is that a win ratio of at least 50% combined with a risk-reward ratio of over 2x ensures positive expected cash flow. By limiting risk to 5% of the account balance, potential drawdowns from consecutive losses are minimized, preserving capital and maintaining positive cash flow expectations.
- If you need further assistance, please don't hesitate to contact us.
