EUR - CPI (YoY) (Apr)

EUR - CPI (YoY) (Apr)

Event	EUR - CPI (YoY) (Apr)			Description
Actual:				The Consumer Price Index (CPI) measures the change in the prices of goods and services contained in a basket of consumer items. The Central bank pays very close attention to this figure in its role of maintaining price stability. A reading that is stronger than forecast is generally supportive (bullish) for the EUR, while a weaker than forecast reading is generally negative (bearish) for the EUR. Learn More: EURJPY EURUSD

AUD - RBA Interest Decision (May)

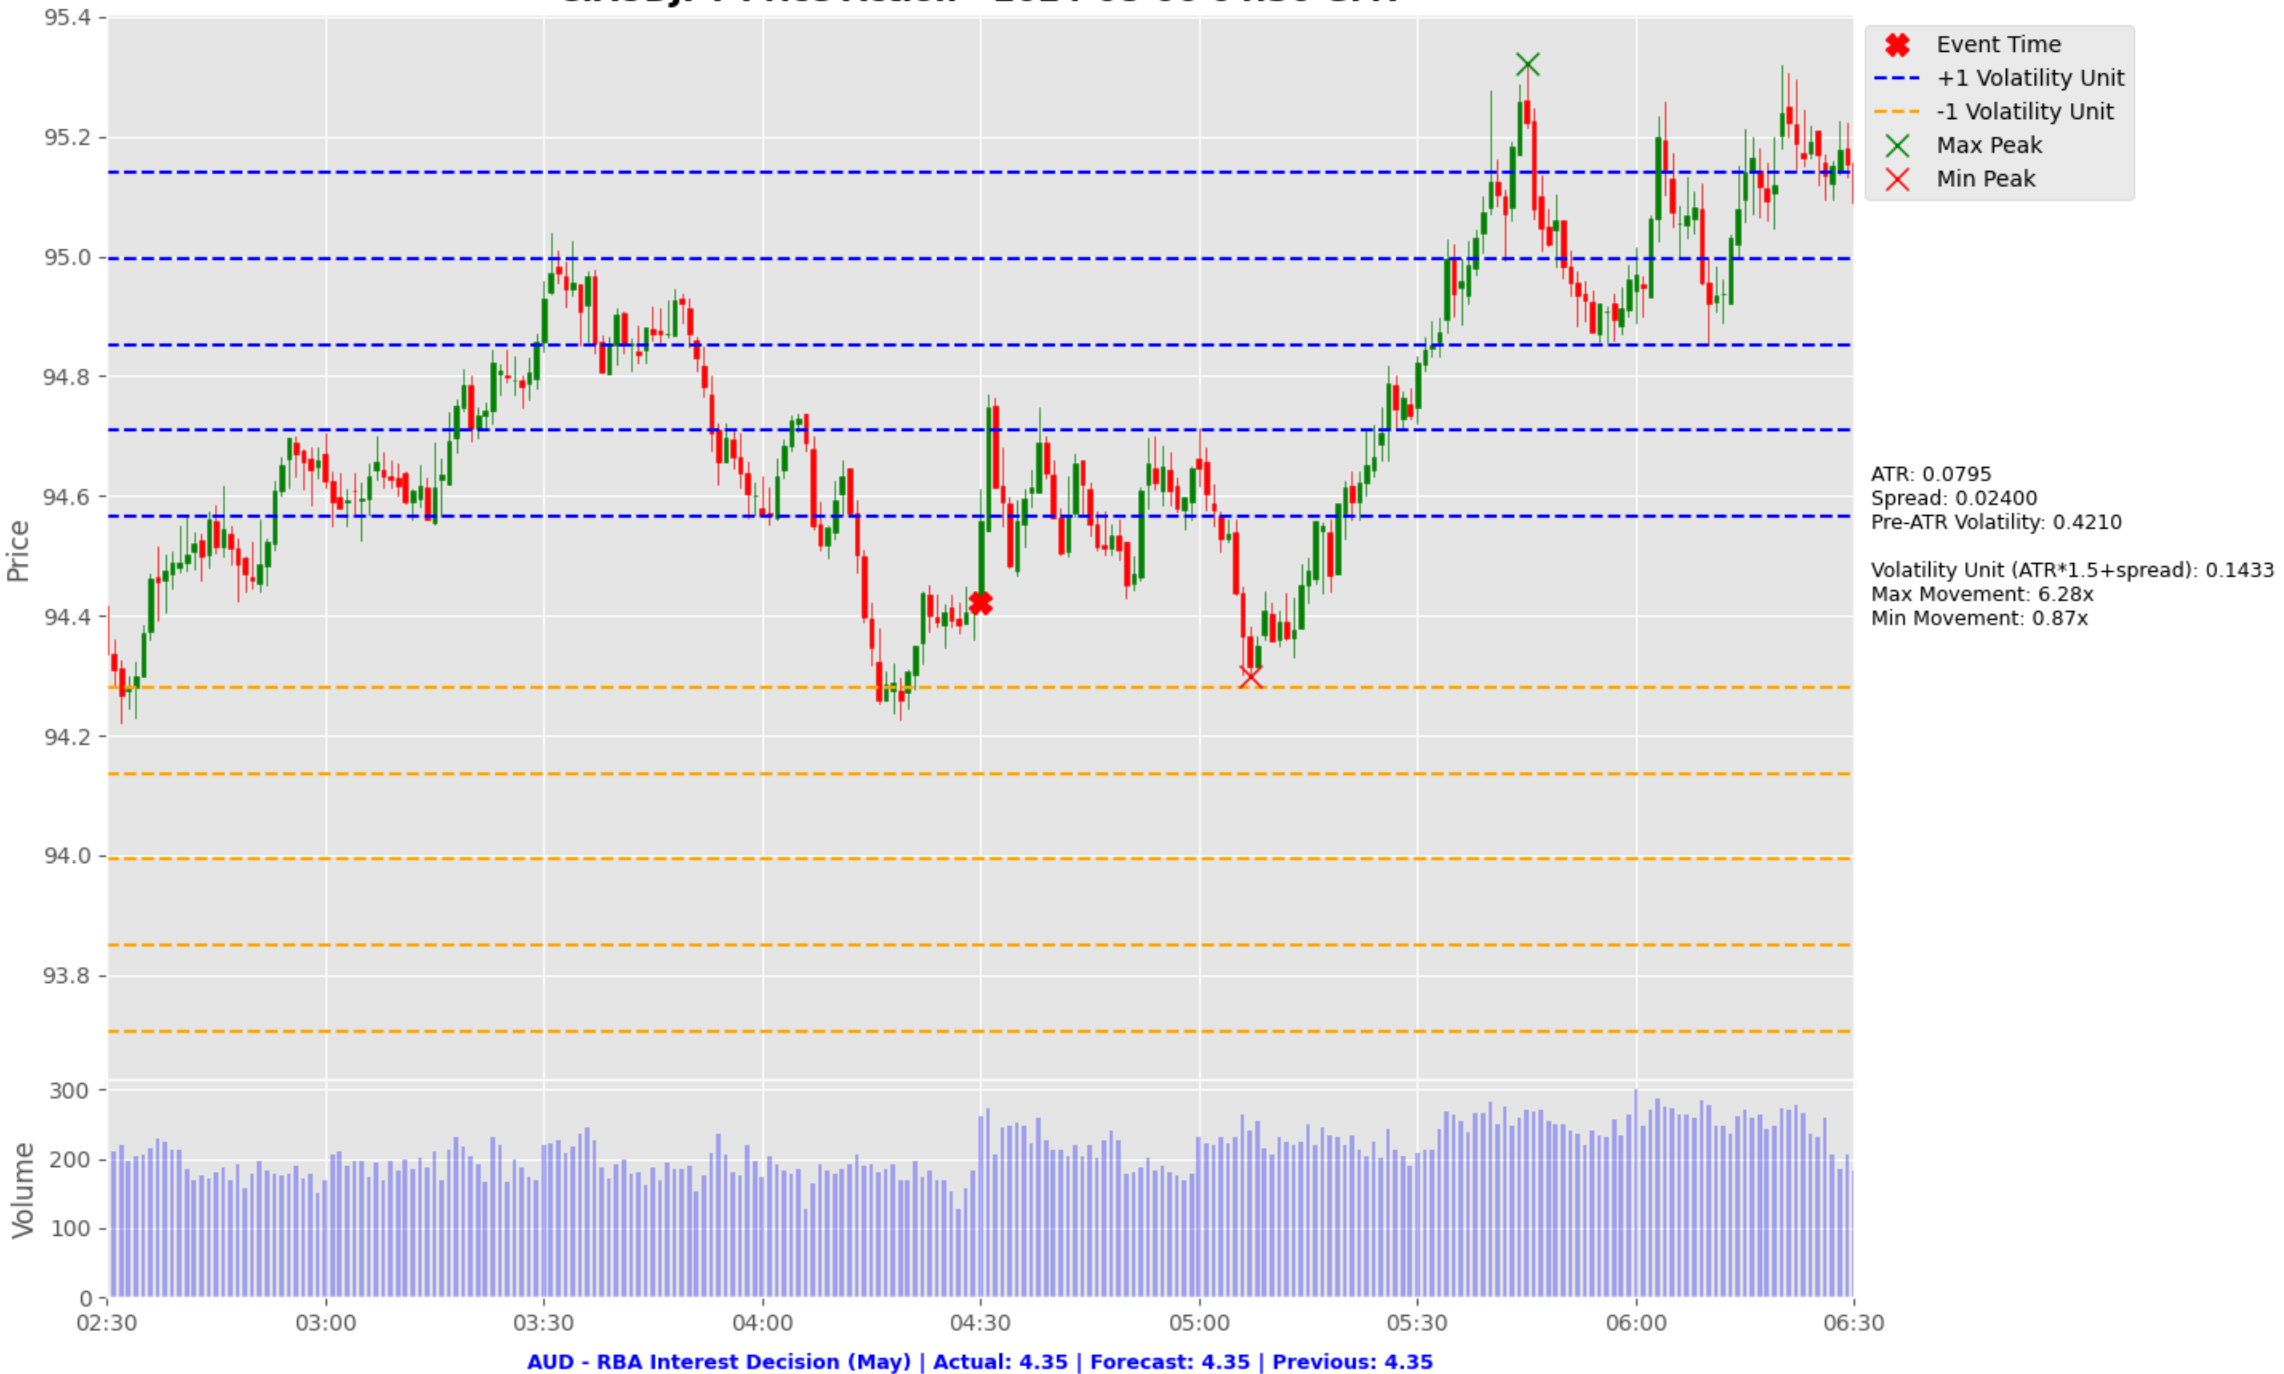

AUD - RBA Interest Decision (May)

Event	AUD - RBA Interest Decision (May)			Description
Actual:				The Reserve Bank of Australia (RBA) reports its decision on where to set the benchmark interest rate. As short term interest rates are an important determinant of currency valuation, traders watch interest rate changes closely. A reading that is stronger than forecast is generally supportive (bullish) for the AUD, while a weaker than forecast reading is generally negative (bearish) for the AUD. Learn More: AUDJPY AUDUSD

USD - Crude Oil Inventories

USD - Crude Oil Inventories

Event	USD - Crude Oil Inventories			Description
Actual:				The Energy Information Administration's (EIA) Crude Oil Inventories measures the weekly change in the number of barrels of commercial crude oil held by US firms. The level of inventories influences the price of petroleum products, which can have an impact on inflation. If the increase in crude inventories is more than expected, it implies weaker demand and is bearish for crude prices. The same can be said if a decline in inventories is less than expected. If the increase in crude is less than expected, it implies greater demand and is bullish for crude prices. The same can be said if a decline in inventories is more than expected. USD - Manufacturing PMI (May) P

USD - Manufacturing PMI (May) P

Event	USD - Manufacturing PMI (May) P			Description
Actual:				The Manufacturing Purchasing Managers' Index (PMI) is a diffusion index incorporating survey results provided by manufacturing firms throughout the country. A reading above fifty suggests the manufacturing sector is expanding, while a reading below fifty suggests the manufacturing sector is in contraction. Policymakers and traders watch these surveys closely as purchasing managers usually have early access to data about their company's performance, rather than waiting for the hard data to emerge. While manufacturing accounts for a far smaller percentage of economic output than services, it is far more cyclical and is therefore a useful indicator of where in the economic cycle the economy is currently situated. A reading that is stronger than forecast is generally supportive (bullish) for the USD while a weaker than forecast reading is generally negative (bearish) for the USD. Learn More: USDJPY EURUSD

USD - Services PMI (May) P

USD - Services PMI (May) P

Event	USD - Services PMI (May) P			Description
Actual:				The Service PMI release is published monthly by Markit Economics. The data are based on surveys of over 400 executives in private sector service companies. The surveys cover transport and communication, financial intermediaries, business and personal services, computing & IT, hotels and restaurants. An index level of 50 denotes no change since the previous month, while a level above 50 signals an improvement, and below 50 indicates a deterioration. A reading that is stronger than forecast is generally supportive (bullish) for the USD, while a weaker than forecast reading is generally negative (bearish) for the USD. Learn More: USDJPY EURUSD

USD - New Home Sales (Apr)

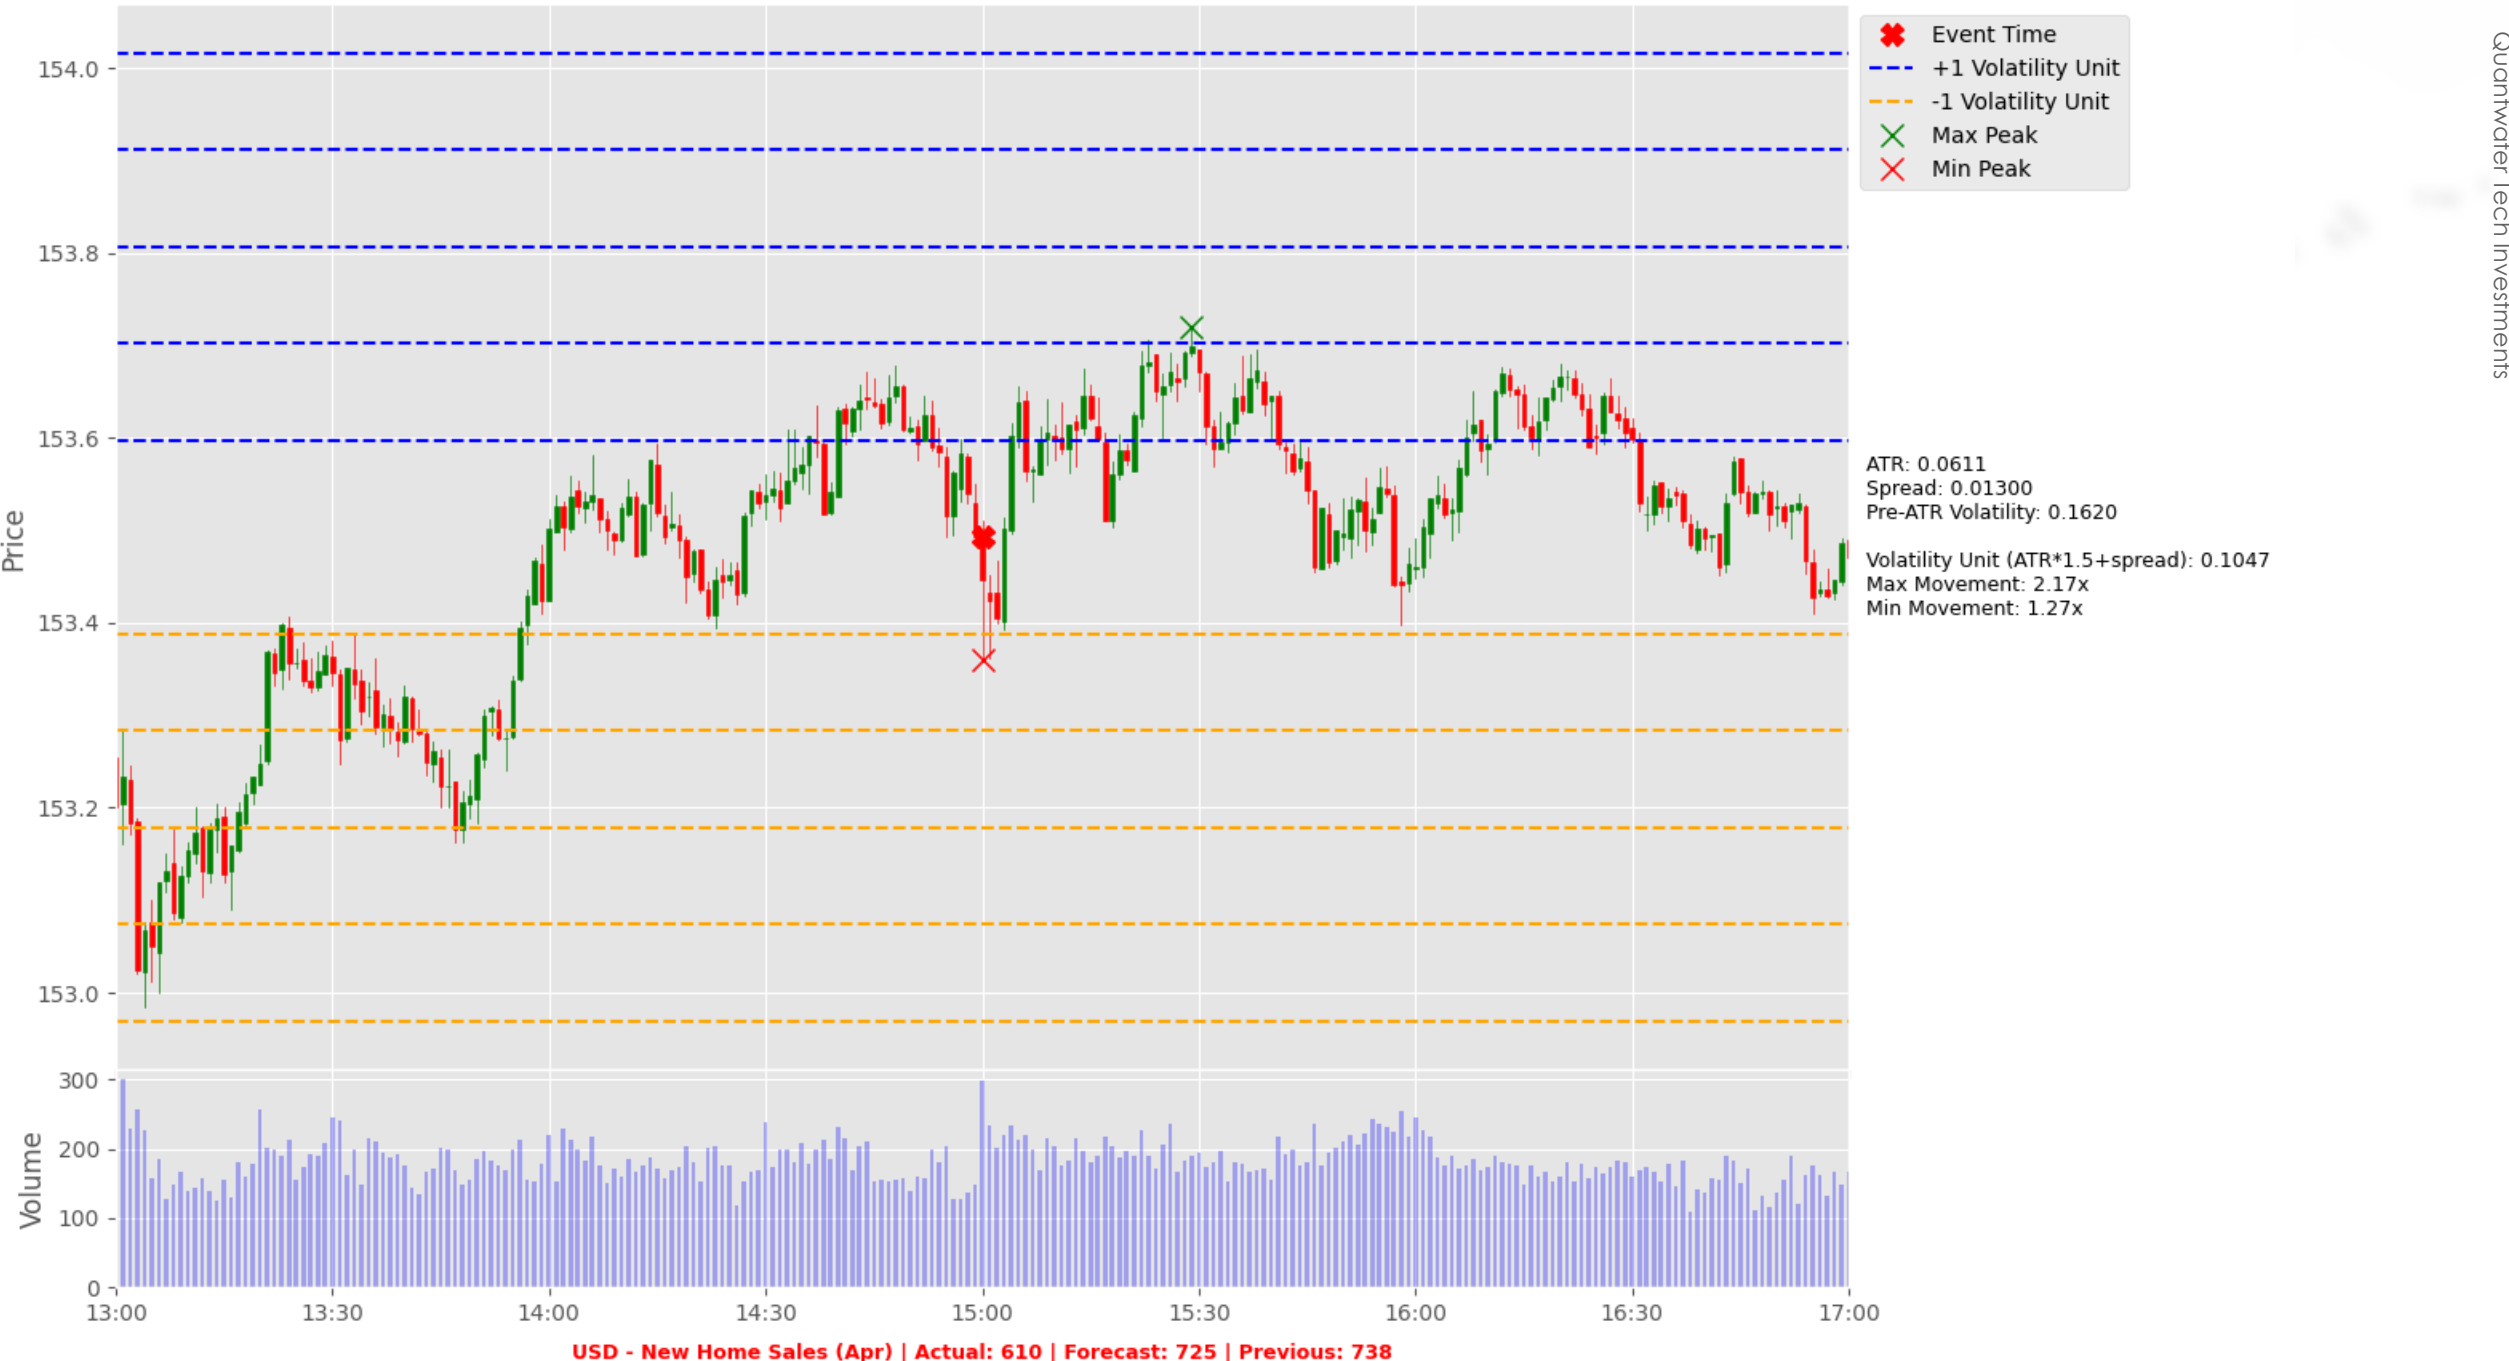

USD - New Home Sales (Apr)

Event	USD - New Home Sales (Apr)			Description
Actual:				Gross Domestic Product (GDP) gauges the inflation-adjusted value of all goods and services produced within the economy. It is the most comprehensive measure of economic activity and an important indicator of economic health. A reading that is stronger than forecast is generally supportive (bullish) for the GBP, while a weaker than forecast reading is generally negative (bearish) for the GBP. Learn More: GBPJPY GBPUSD

Important Information

Quantwater Tech Investments Data Release Deck – 18th May 2025

This document is for informational purposes only and does not constitute investment advice, an offer, or a solicitation to buy or sell any securities or financial instruments.

Past performance is not indicative of future results. Investments involve inherent risks, including the possible loss of principal. No representation or warranty, express or implied, is made regarding the accuracy, completeness, or reliability of the information contained herein.

The information in this presentation is derived from publicly available sources and internal analysis as of the date indicated and is subject to change without notice. Quantwater Tech Investments and its affiliates do not undertake any obligation to update or revise this material.

Neither Quantwater Tech Investments nor any of its affiliates, officers, or employees shall be liable for any direct or indirect losses arising from the use of this information. Any misrepresentation is strictly prohibited.

Key Economic & Analytical Concepts

Economic Data Interpretation

- **Forecast Vs. Actual:** Comparing predicted values with released data
- **Previous Reading:** Last reported value, used as a benchmark
- **Market Impact:** How releases affect financial markets

Average True Range (ATR)

- **Definition:** A technical indicator that measures market volatility
- **Calculations:**
 - Calculate True Range (TR) for each period:
 - $TR = \max [(high - low), abs(high - previous\ close), abs(low - previous\ close)]$
 - $ATR = \text{Simple moving average of TR over N periods (typically 14)}$
- **Interpretation:**
 - Higher ATR = Higher Volatility
 - Lower ATR = Lower Volatility
- **Usage in Our Analysis:**
 - Helps standardize price movements across different market conditions
 - Forms the basis of our Volatility Unit Calculations

Volatility Unit

- **Formula:** $(ATR * multiple) + Spread$ (multiple is typically 1.5)
- **Purpose:** Standardizes price movements

Price Movements

- **Max Movement:** Largest upward price move after event
- **Min Movement:** Largest downward price move after event
- Both measured in Volatility Units

Using This Analysis

- Analyzing volatility across different economic releases helps identify patterns in market reactions.
- This approach allows for evaluating the significance of economic indicators based on their market impact.
- Adhering to standard trading guidelines, the risk amount should not exceed 5% of the trading balance. A risk-reward ratio of 1:4x–6x, guided by the win ratio and historical data from this presentation or other estimates, can be used to determine the appropriate risk level, take-profit point, and position size.
- Trade automation on the MT5 platform can be implemented using the expert advisor linked below, which takes the specified parameters as input.
- An MT5 account can be accessed through a brokerage/[securities dealer firm](#) or by using a proprietary (prop) trading account.
- **Example:**
 - Volatility analysis of economic releases, such as the Non-Farm Payroll (NFP) event, helps identify patterns in market reactions. For instance, if the NFP event typically results in a minimum movement of 0.5x and a maximum movement of 3x, a stop-loss of 1x and a take-profit of 3x can be strategically applied.
 - Following prudent risk management, the risk per trade should not exceed 5% of the trading balance, typically. For a \$100,000 trading account (max loss amount post which trading is halted), this translates to a \$5,000 stop-loss and a \$15,000 take-profit.
 - The guiding principle is that a win ratio of at least 50% combined with a risk-reward ratio of over 2x ensures positive expected cash flow. By limiting risk to 5% of the account balance, potential drawdowns from consecutive losses are minimized, preserving capital and maintaining positive cash flow expectations.
- If you need further assistance, please don't hesitate to contact us.
