CNY - GDP (YoY) (Q1)

CNY - GDP (YoY) (Q1)

Event	CNY - GDP (YoY) (Q1)			Description
Actual:				Gross Domestic Product (GDP) gauges the inflation-adjusted value of all goods and services produced within the economy. It is the most comprehensive measure of economic activity and an important indicator of economic health. A reading that is stronger than forecast is generally supportive (bullish) for the CNY, while a weaker than forecast reading is generally negative (bearish) for the CNY. Learn More: USDCNY USDCNH

USD - Crude Oil Inventories

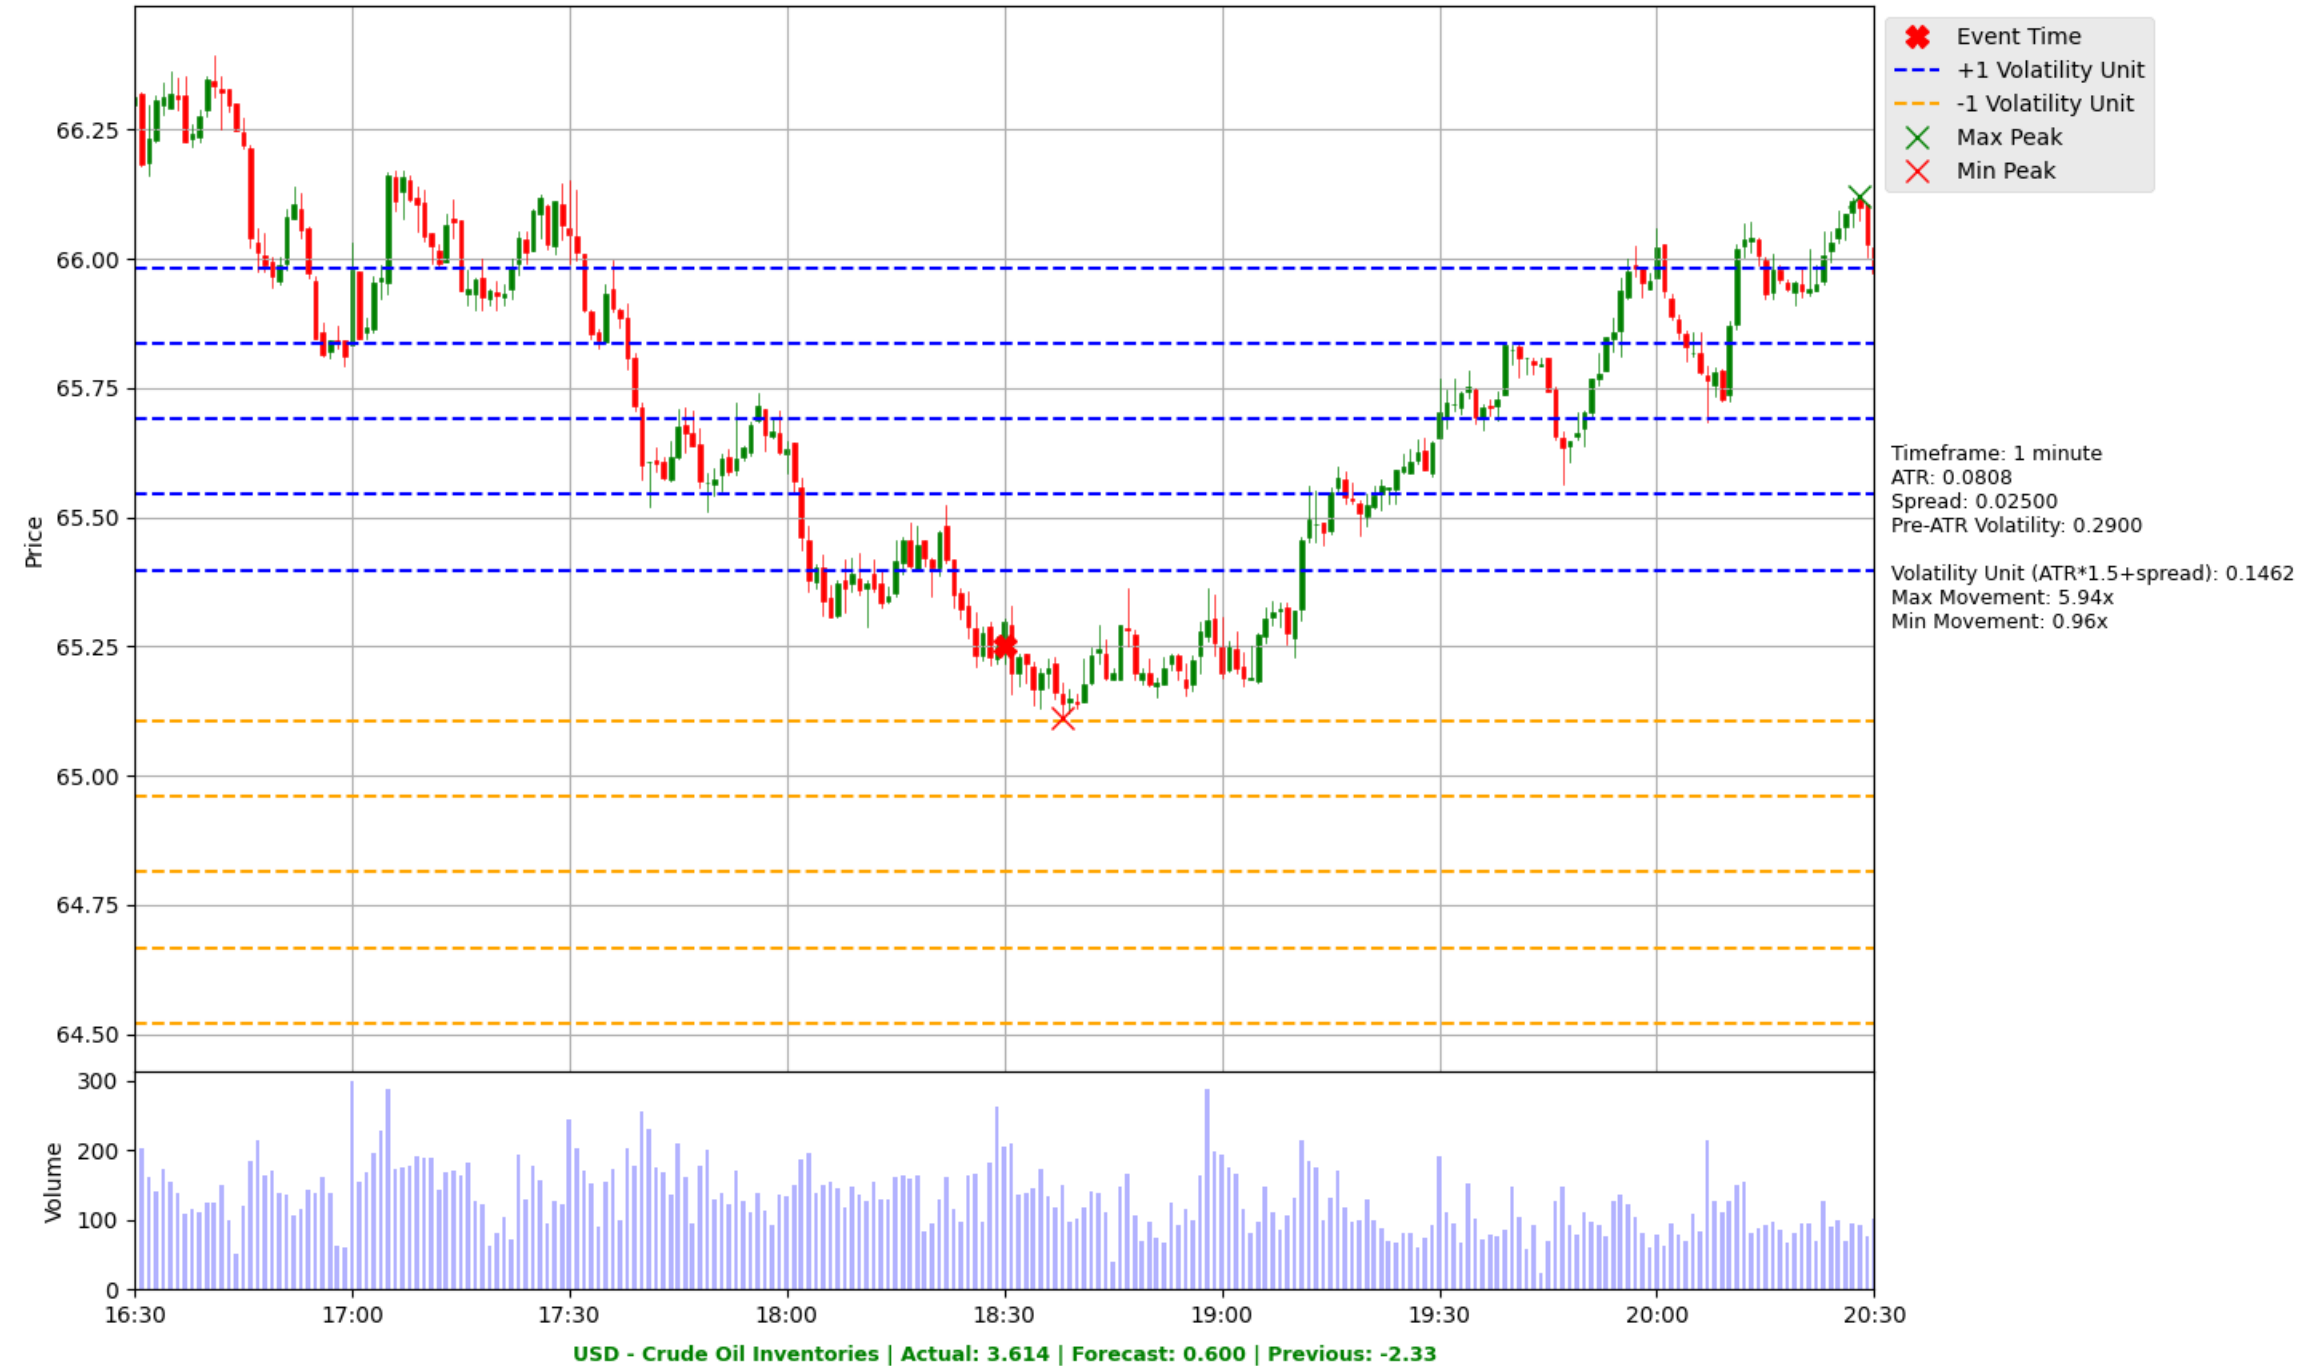

USD - Crude Oil Inventories

Event	USD - Crude Oil Inventories			Description
Actual:				The Energy Information Administration's (EIA) Crude Oil Inventories measures the weekly change in the number of barrels of commercial crude oil held by US firms. The level of inventories influences the price of petroleum products, which can have an impact on inflation. If the increase in crude inventories is more than expected, it implies weaker demand and is bearish for crude prices. The same can be said if a decline in inventories is less than expected. If the increase in crude is less than expected, it implies greater demand and is bullish for crude prices. The same can be said if a decline in inventories is more than expected. A scatter plot showing a positive linear correlation between two variables. The data points are represented by small grey circles, forming a dense, upward-sloping band. A solid black regression line is drawn through the data, starting from the bottom-left and extending towards the top-right. The plot is set against a light grey background with a white grid. The title "USD - Fed Chair Powell Speaks" is located in the top-left corner in a bold, dark blue font.

USD - Fed Chair Powell Speaks

Event	USD - Fed Chair Powell Speaks			Description
Actual:				Federal Reserve Chair Jerome Powell (Feb. 2018 – Feb. 2026) is to speak. As head of the Fed, which controls short term interest rates, he has more influence over the U.S. dollar's value than any other person. Traders closely watch his speeches as they are often used to drop hints regarding future monetary policy. Learn More: USDJPY EURUSD

EUR -Deposit Facility Rate (Apr)

EUR -Deposit Facility Rate (Apr)

Event	EUR -Deposit Facility Rate (Apr)			Description
Actual:				The Producer Price Index (PPI) measures a change in input prices of raw, semi-finished or finished goods and services. If input costs rise, some will be absorbed by the producer and some passed on to the consumer. Conversely, if input costs fall, some of the decline will be enjoyed as wider profit margins by the producer and some will be passed on to the consumer in the form of lower prices. Because PPI impacts consumer prices, it is watched by central bankers as part of fulfilling their mandate of price stability. A reading that is stronger than forecast is generally supportive (bullish) for the USD, while a weaker than forecast reading is generally negative (bearish) for the USD. Learn More: EURJPY EURUSD

EUR - ECB Interest Rate Decision (Apr)

EUR - ECB Interest Rate Decision (Apr)

Event	EUR - ECB Interest Rate Decision (Apr)			Description
Actual:				The European Central Bank publishes its decision on where to set the benchmark interest rate. As short term interest rates are an important determinant of currency valuation, traders watch interest rate changes closely. A reading that is stronger than forecast is generally supportive (bullish) for the EUR, while a weaker than forecast reading is generally negative (bearish) for the EUR. Learn More: EURJPY EURUSD

USD - Initial Jobless Claims

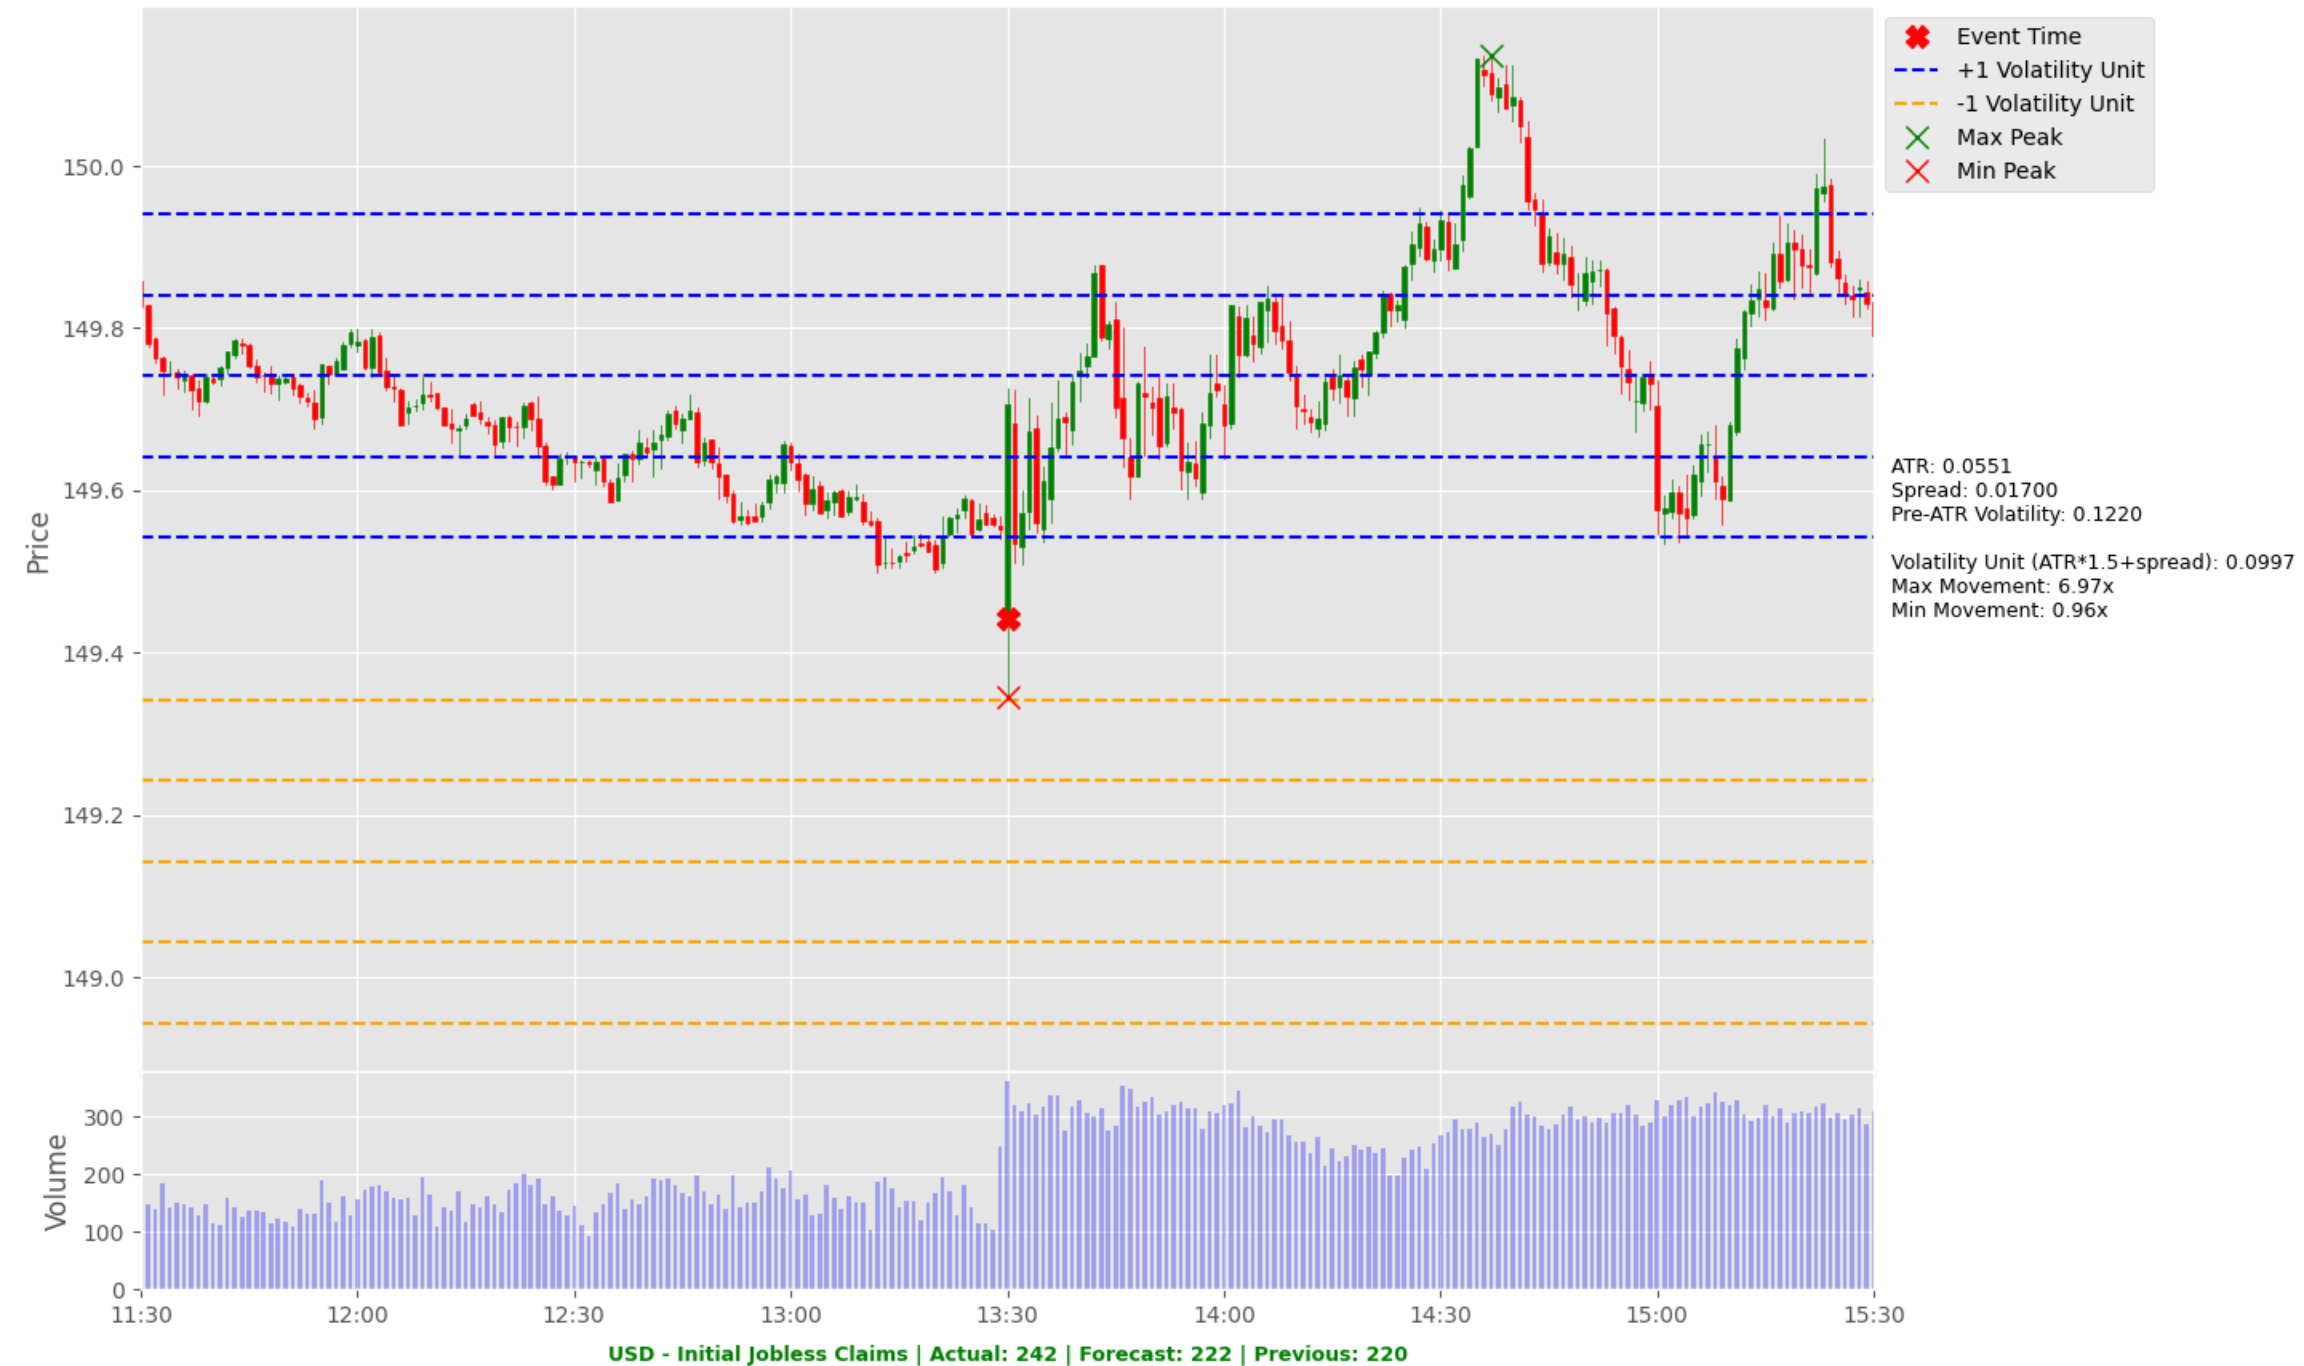

USD - Initial Jobless Claims

Event	USD - Initial Jobless Claims			Description
Actual:				Initial Jobless Claims measures the number of people who filed for unemployment insurance for the first time during the past week. This is the most timely U.S. economic data, but the market impact varies from week to week. A reading that is higher than forecast is generally negative (bearish) for the USD, while a lower than forecast reading is generally supportive (bullish) for the USD. Learn More: USDJPY EURUSD

**USD - Philadelphia Fed Manufacturing
Index (Apr)**

USD - Philadelphia Fed Manufacturing Index (Apr)

Event	USD - Philadelphia Fed Manufacturing Index (Apr)			Description
Actual:				The Philadelphia Federal Reserve Manufacturing Index measures the relative level of business conditions amongst manufacturers in the Federal reserve district. A level above zero on the index indicates improving conditions; below indicates worsening conditions. The data is compiled from a survey of about 250 manufacturers in the Philadelphia Federal Reserve district. A reading that is stronger than forecast is generally supportive (bullish) for the USD, while a weaker than forecast reading is generally negative (bearish) for the USD. Learn More: USDJPY EURUSD

EUR - ECB Press Conference

EUR - ECB Press Conference

Event	EUR - ECB Press Conference			Description
Actual:				The European Central Bank (ECB) press conference is held monthly, about 45 minutes after the Minimum Bid Rate is announced. The conference is approximately an hour long and has two parts. Firstly, a prepared statement is read, then the conference is open to press questions. The press conference examines the factors which affected the ECB's interest rate decision and deals with the overall economic outlook and inflation. Most importantly, it provides clues regarding future monetary policy. High levels of volatility can frequently be observed during the press conference as press questions lead to unscripted answers. Quantwater Tech Investments Data Release Deck – 13th April 2025

This document is for informational purposes only and does not constitute investment advice, an offer, or a solicitation to buy or sell any securities or financial instruments.

Past performance is not indicative of future results. Investments involve inherent risks, including the possible loss of principal. No representation or warranty, express or implied, is made regarding the accuracy, completeness, or reliability of the information contained herein.

The information in this presentation is derived from publicly available sources and internal analysis as of the date indicated and is subject to change without notice. Quantwater Tech Investments and its affiliates do not undertake any obligation to update or revise this material.

Neither Quantwater Tech Investments nor any of its affiliates, officers, or employees shall be liable for any direct or indirect losses arising from the use of this information. Any misrepresentation is strictly prohibited.

Key Economic & Analytical Concepts

Economic Data Interpretation

- **Forecast Vs. Actual:** Comparing predicted values with released data
- **Previous Reading:** Last reported value, used as a benchmark
- **Market Impact:** How releases affect financial markets

Price Movements

- **Max Movement:** Largest upward price move after event
- **Min Movement:** Largest downward price move after event
- Both measured in Volatility Units

Average True Range (ATR)

- **Definition:** A technical indicator that measures market volatility
- **Calculations:**
 - Calculate True Range (TR) for each period:
 - $TR = \max [(high - low), abs(high - previous\ close), abs(low - previous\ close)]$
 - $ATR = \text{Simple moving average of TR over N periods (typically 14)}$
- **Interpretation:**
 - Higher ATR = Higher Volatility
 - Lower ATR = Lower Volatility
- **Usage in Our Analysis:**
 - Helps standardize price movements across different market conditions
 - Forms the basis of our Volatility Unit Calculations

Using This Analysis

- Analyzing volatility across different economic releases helps identify patterns in market reactions.
- This approach allows for evaluating the significance of economic indicators based on their market impact.
- Adhering to standard trading guidelines, the risk amount should not exceed 5% of the trading balance. A risk-reward ratio of 1:4x–6x, guided by the win ratio and historical data from this presentation or other estimates, can be used to determine the appropriate risk level, take-profit point, and position size.
- Trade automation on the MTS platform can be implemented using the expert advisor linked below, which takes the specified parameters as input.
- **Example:**
 - Volatility analysis of economic releases, such as the Non-Farm Payroll (NFP) event, helps identify patterns in market reactions. For instance, if the NFP event typically results in a minimum movement of 0.5x and a maximum movement of 3x, a stop-loss of 1x and a take-profit of 3x can be strategically applied.
 - Following prudent risk management, the risk per trade should not exceed 5% of the trading balance, typically. For a \$100,000 trading account (max loss amount post which trading is halted), this translates to a \$5,000 stop-loss and a \$15,000 take-profit.
 - The guiding principle is that a win ratio of at least 50% combined with a risk-reward ratio of over 2x ensures positive expected cash flow. By limiting risk to 5% of the account balance, potential drawdowns from consecutive losses are minimized, preserving capital and maintaining positive cash flow expectations.
- If you need further assistance, please don't hesitate to contact us.

Volatility Unit

- **Formula:** $(ATR * multiple) + Spread$ (multiple is typically 1.5)
- **Purpose:** Standardizes price movements
