CNY - GDP (YoY) (Q3)

CNY - GDP (YoY) (Q3)

Event	GDP (YoY) (Q3)			Description
Actual:				Gross Domestic Product (GDP) measures the annualized change in the inflation-adjusted value of all goods and services produced by the economy. It is the broadest measure of economic activity and the primary indicator of the economy's health. A higher than expected reading should be taken as positive/bullish for the CNY, while a lower than expected reading should be taken as negative/bearish for the CNY. Learn More: USDCNH USDCNY

USD - Initial Jobless Claims

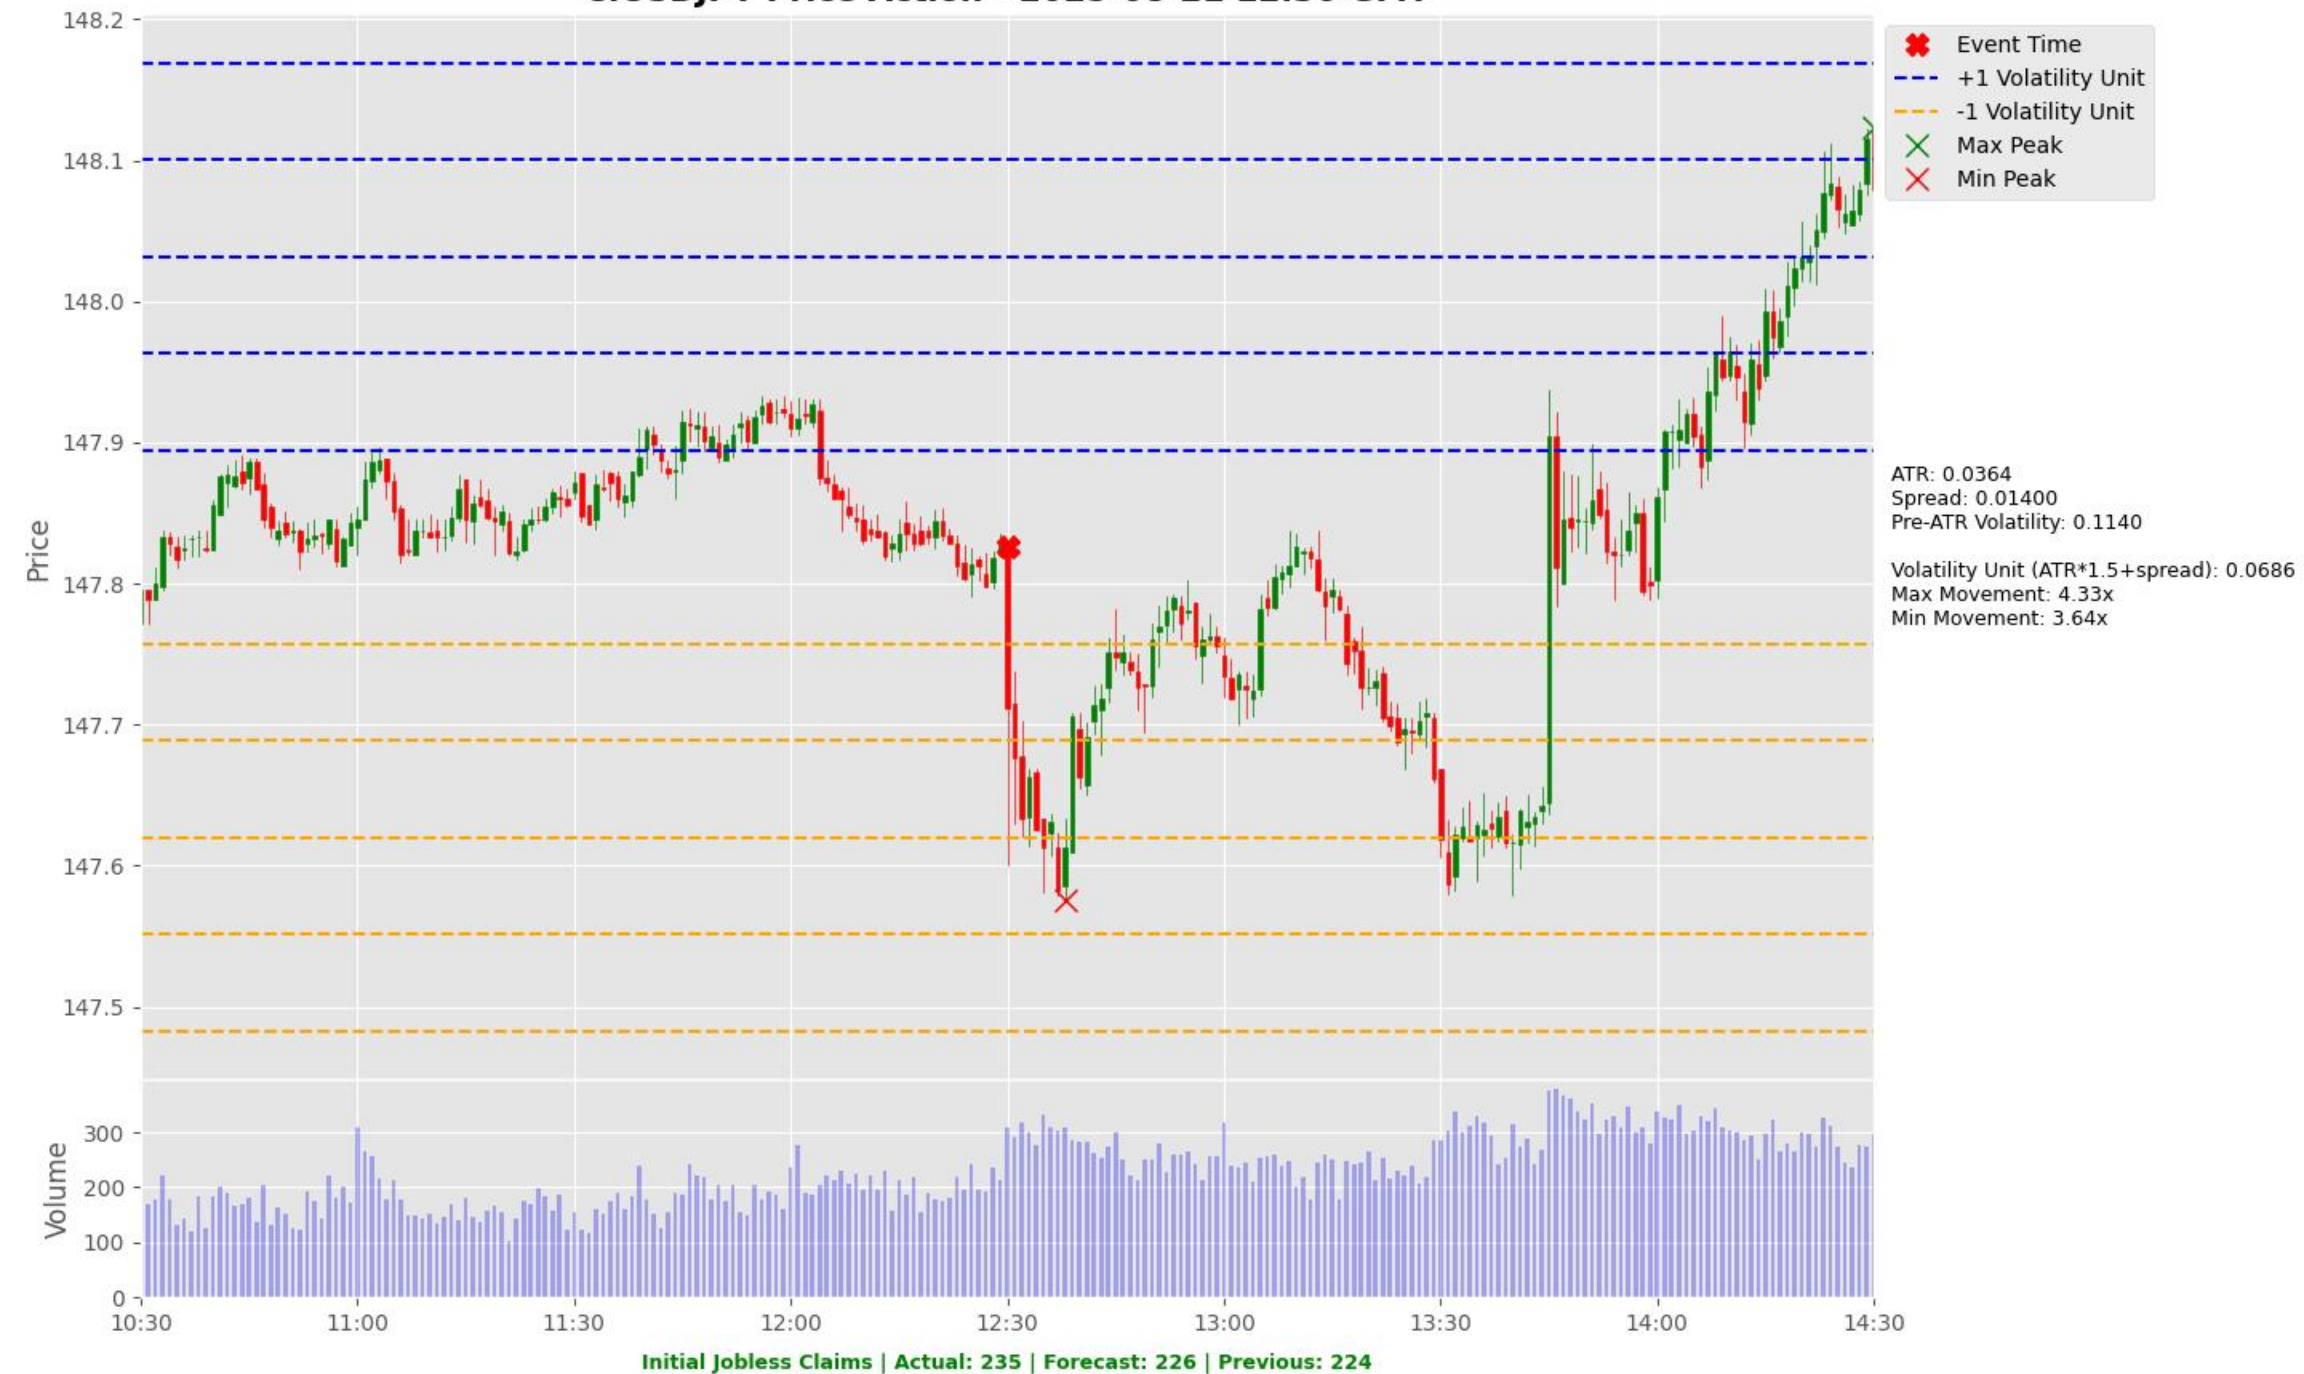

USD - Initial Jobless Claims

Event	Initial Jobless Claims			Description
Actual:				Initial Jobless Claims measures the number of individuals who filed for unemployment insurance for the first time during the past week. This is the earliest U.S. economic data, but the market impact varies from week to week. A higher than expected reading should be taken as negative/bearish for the USD, while a lower than expected reading should be taken as positive/bullish for the USD. Learn More: USDJPY EURUSD

USD - Existing Home Sales (Sep)

USD - Existing Home Sales (Sep)

Event	Existing Home Sales (Sep)			Description
Actual:				Existing Home Sales measures the change in the annualized number of existing residential buildings that were sold during the previous month. This report helps to gauge the strength of the U.S. housing market and is a key indicator of overall economic strength. A higher than expected reading should be taken as positive/bullish for the USD, while a lower than expected reading should be taken as negative/bearish for the USD. Learn More: USDJPY EURUSD

USD - S&P Global Manufacturing PMI (Oct)

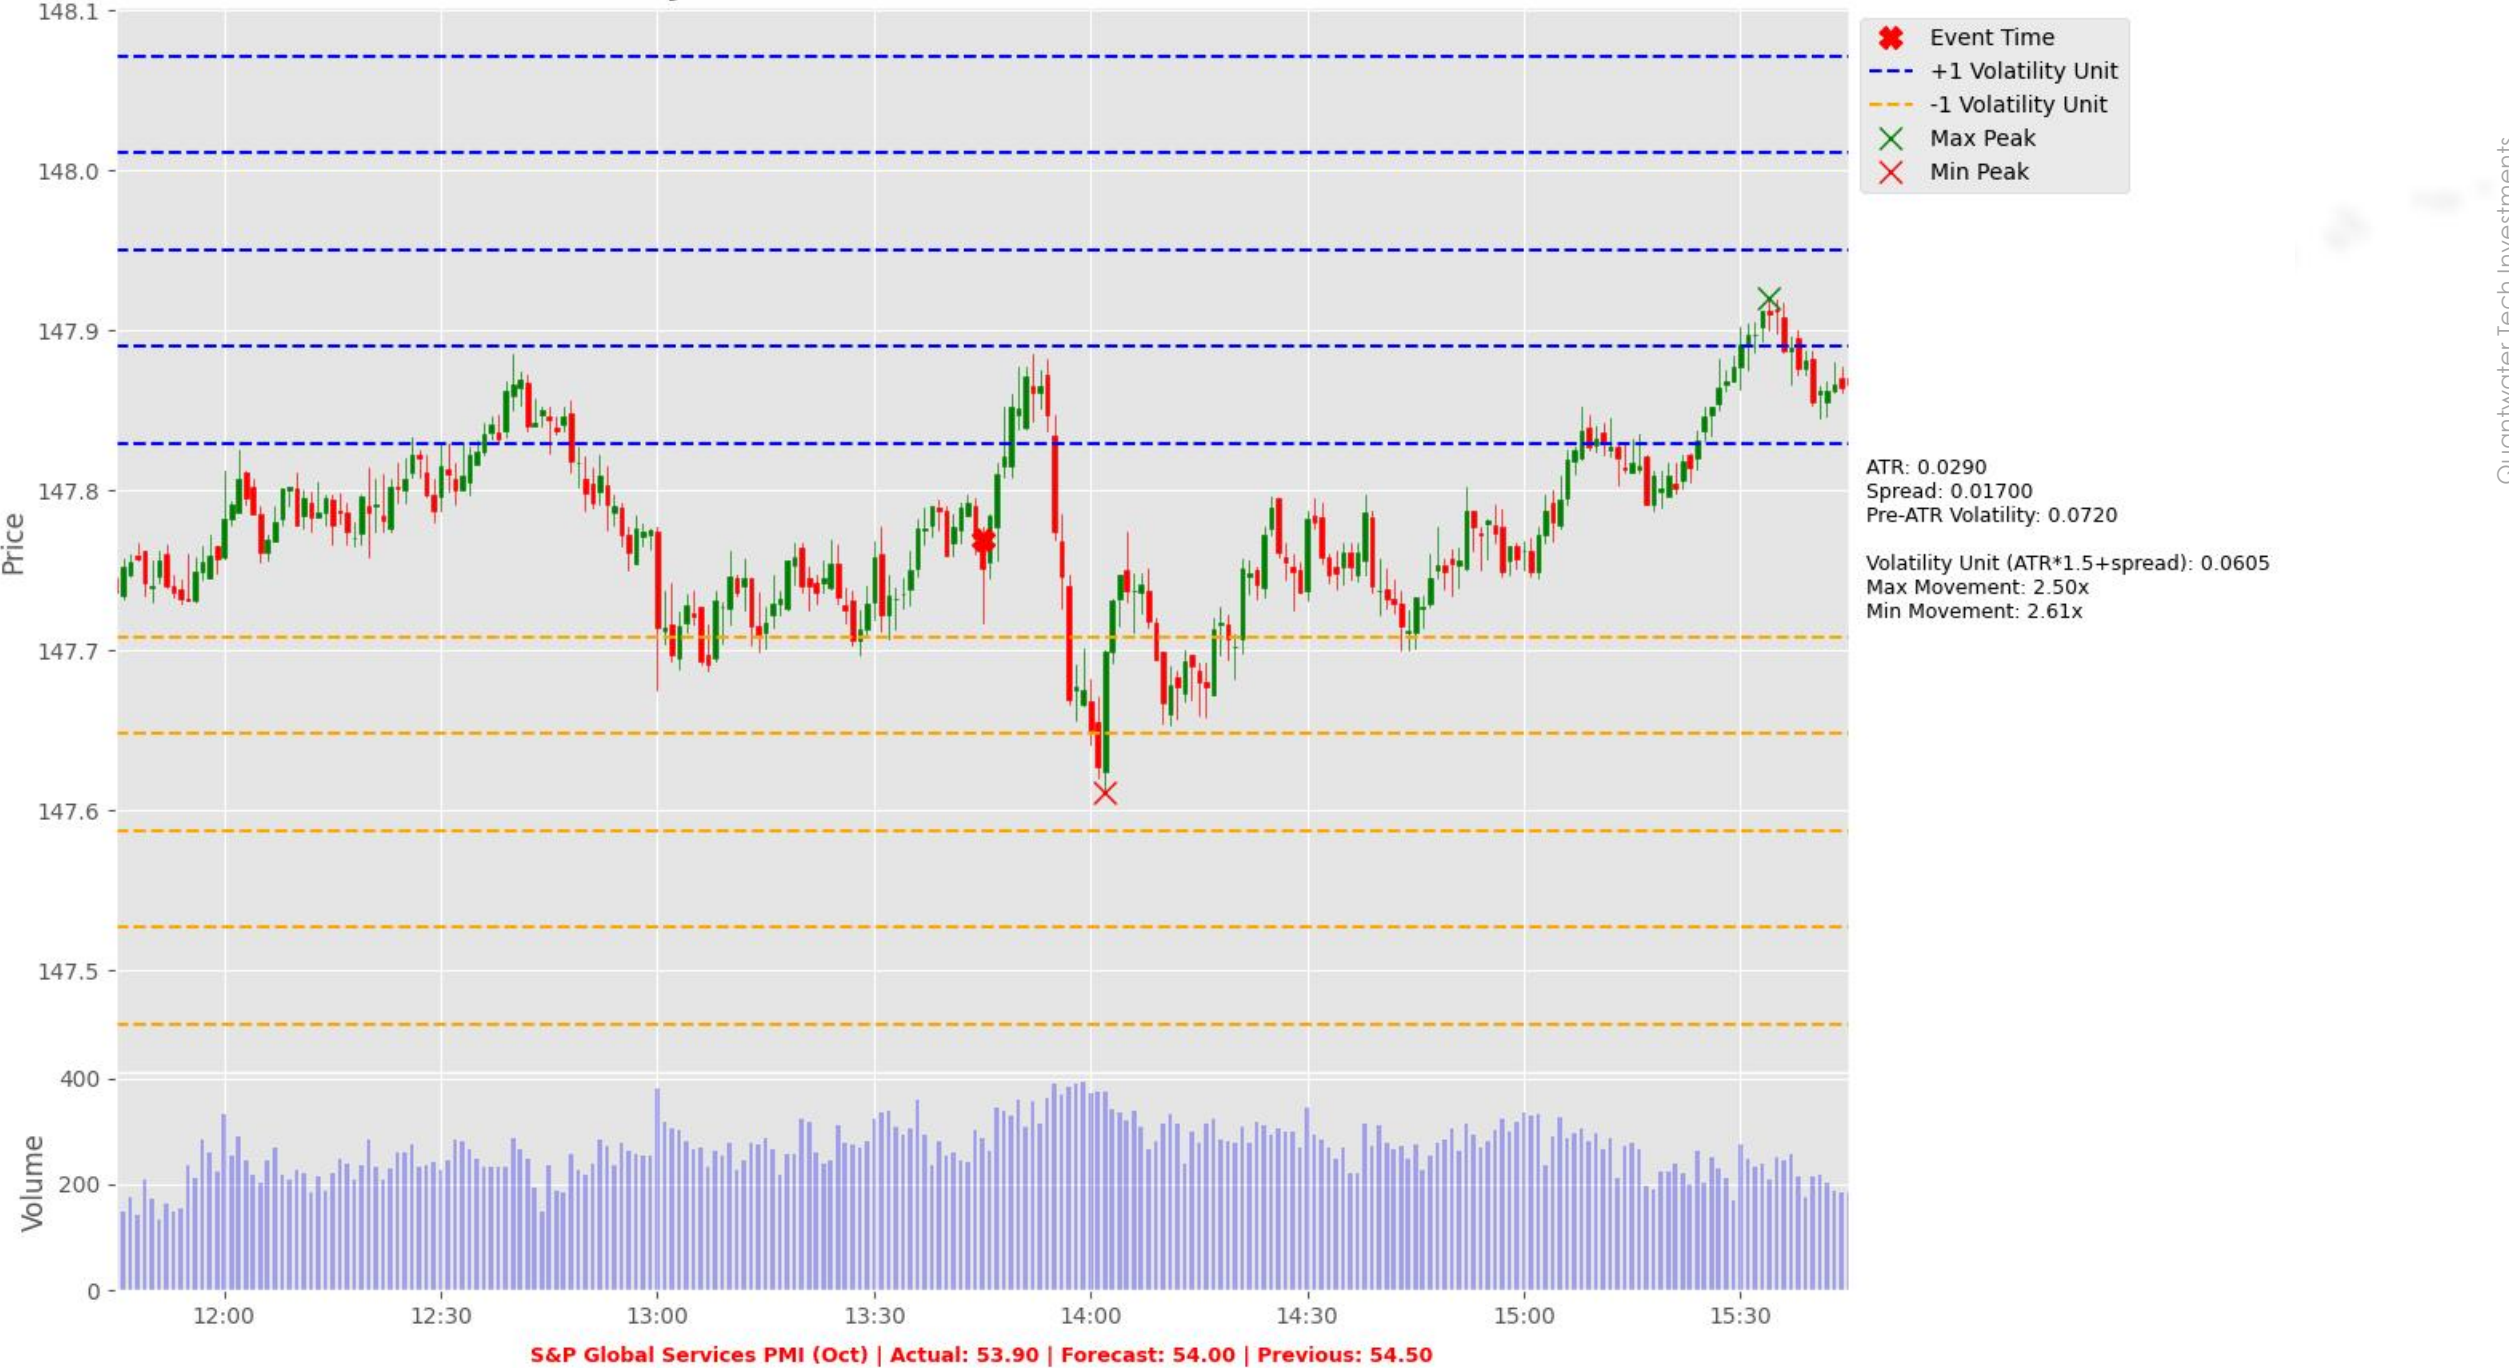

USD - S&P Global Manufacturing PMI (Oct)

Event	S&P Global Manufacturing PMI (Oct)			Description
Actual:				The Manufacturing Purchasing Managers' Index (PMI) measures the activity level of purchasing managers in the manufacturing sector. A reading above 50 indicates expansion in the sector; below 50 indicates contraction. Traders watch these surveys closely as purchasing managers usually have early access to data about their company's performance, which can be a leading indicator of overall economic performance. A higher than expected reading should be taken as positive/bullish for the USD while a lower than expected reading should be taken as negative/bearish for the USD. Learn More: USDJPY EURUSD

USD - S&P Global Services PMI (Oct)

USD - S&P Global Services PMI (Oct)

Event	S&P Global Services PMI (Oct)			Description
Actual:				The Service PMI release is published monthly by Markit Economics. The data are based on surveys of over 400 executives in private sector service companies. The surveys cover transport and communication, financial intermediaries, business and personal services, computing & IT, hotels and restaurants. An index level of 50 denotes no change since the previous month, while a level above 50 signals an improvement, and below 50 indicates a deterioration. A reading that is stronger than forecast is generally supportive (bullish) for the USD, while a weaker than forecast reading is generally negative (bearish) for the USD. Learn More: USDJPY EURUSD

USD - New Home Sales (Sep)

USD - New Home Sales (Sep)

Event	New Home Sales (Sep)			Description
Actual:				New Home Sales measures the annualized number of new single-family homes that were sold during the previous month. This report tends to have more impact when it's released ahead of Existing Home Sales because the reports are tightly correlated. A higher than expected reading should be taken as positive/bullish for the USD, while a lower than expected reading should be taken as negative/bearish for the USD. Learn More: USDJPY EURUSD

Quantwater Tech Investments Data Release Deck – 28th September 2025

This document is for informational purposes only and does not constitute investment advice, an offer, or a solicitation to buy or sell any securities or financial instruments.

Past performance is not indicative of future results. Investments involve inherent risks, including the possible loss of principal. No representation or warranty, express or implied, is made regarding the accuracy, completeness, or reliability of the information contained herein.

The information in this presentation is derived from publicly available sources and internal analysis as of the date indicated and is subject to change without notice. Quantwater Tech Investments and its affiliates do not undertake any obligation to update or revise this material.

Neither Quantwater Tech Investments nor any of its affiliates, officers, or employees shall be liable for any direct or indirect losses arising from the use of this information. Any misrepresentation is strictly prohibited.

Key Economic & Analytical Concepts

Economic Data Interpretation

- **Forecast Vs. Actual:** Comparing predicted values with released data
- **Previous Reading:** Last reported value
- **Market Impact:** How releases affect financial markets

Average True Range (ATR)

- **Definition:** A technical indicator that measures market volatility
- **Calculations:**
 - Calculate True Range (TR) for each period:
 - $TR = \max [(high - low), abs(high - previous\ close), abs(low - previous\ close)]$
 - $ATR = \text{Simple moving average of TR over N periods (typically 14)}$
- **Interpretation:**
 - Higher ATR = Higher Volatility
 - Lower ATR = Lower Volatility
- **Usage in Our Analysis:**
 - Helps standardize price movements across different market conditions
 - Forms the basis of our Volatility Unit Calculations

Volatility Unit

- **Formula:** $(ATR * multiple) + Spread$ (*multiple is typically 1.5*)
- **Purpose:** Standardizes price movements

Price Movements

- **Max Movement:** Largest upward price move after event
- **Min Movement:** Largest downward price move after event
- Both measured in Volatility Units

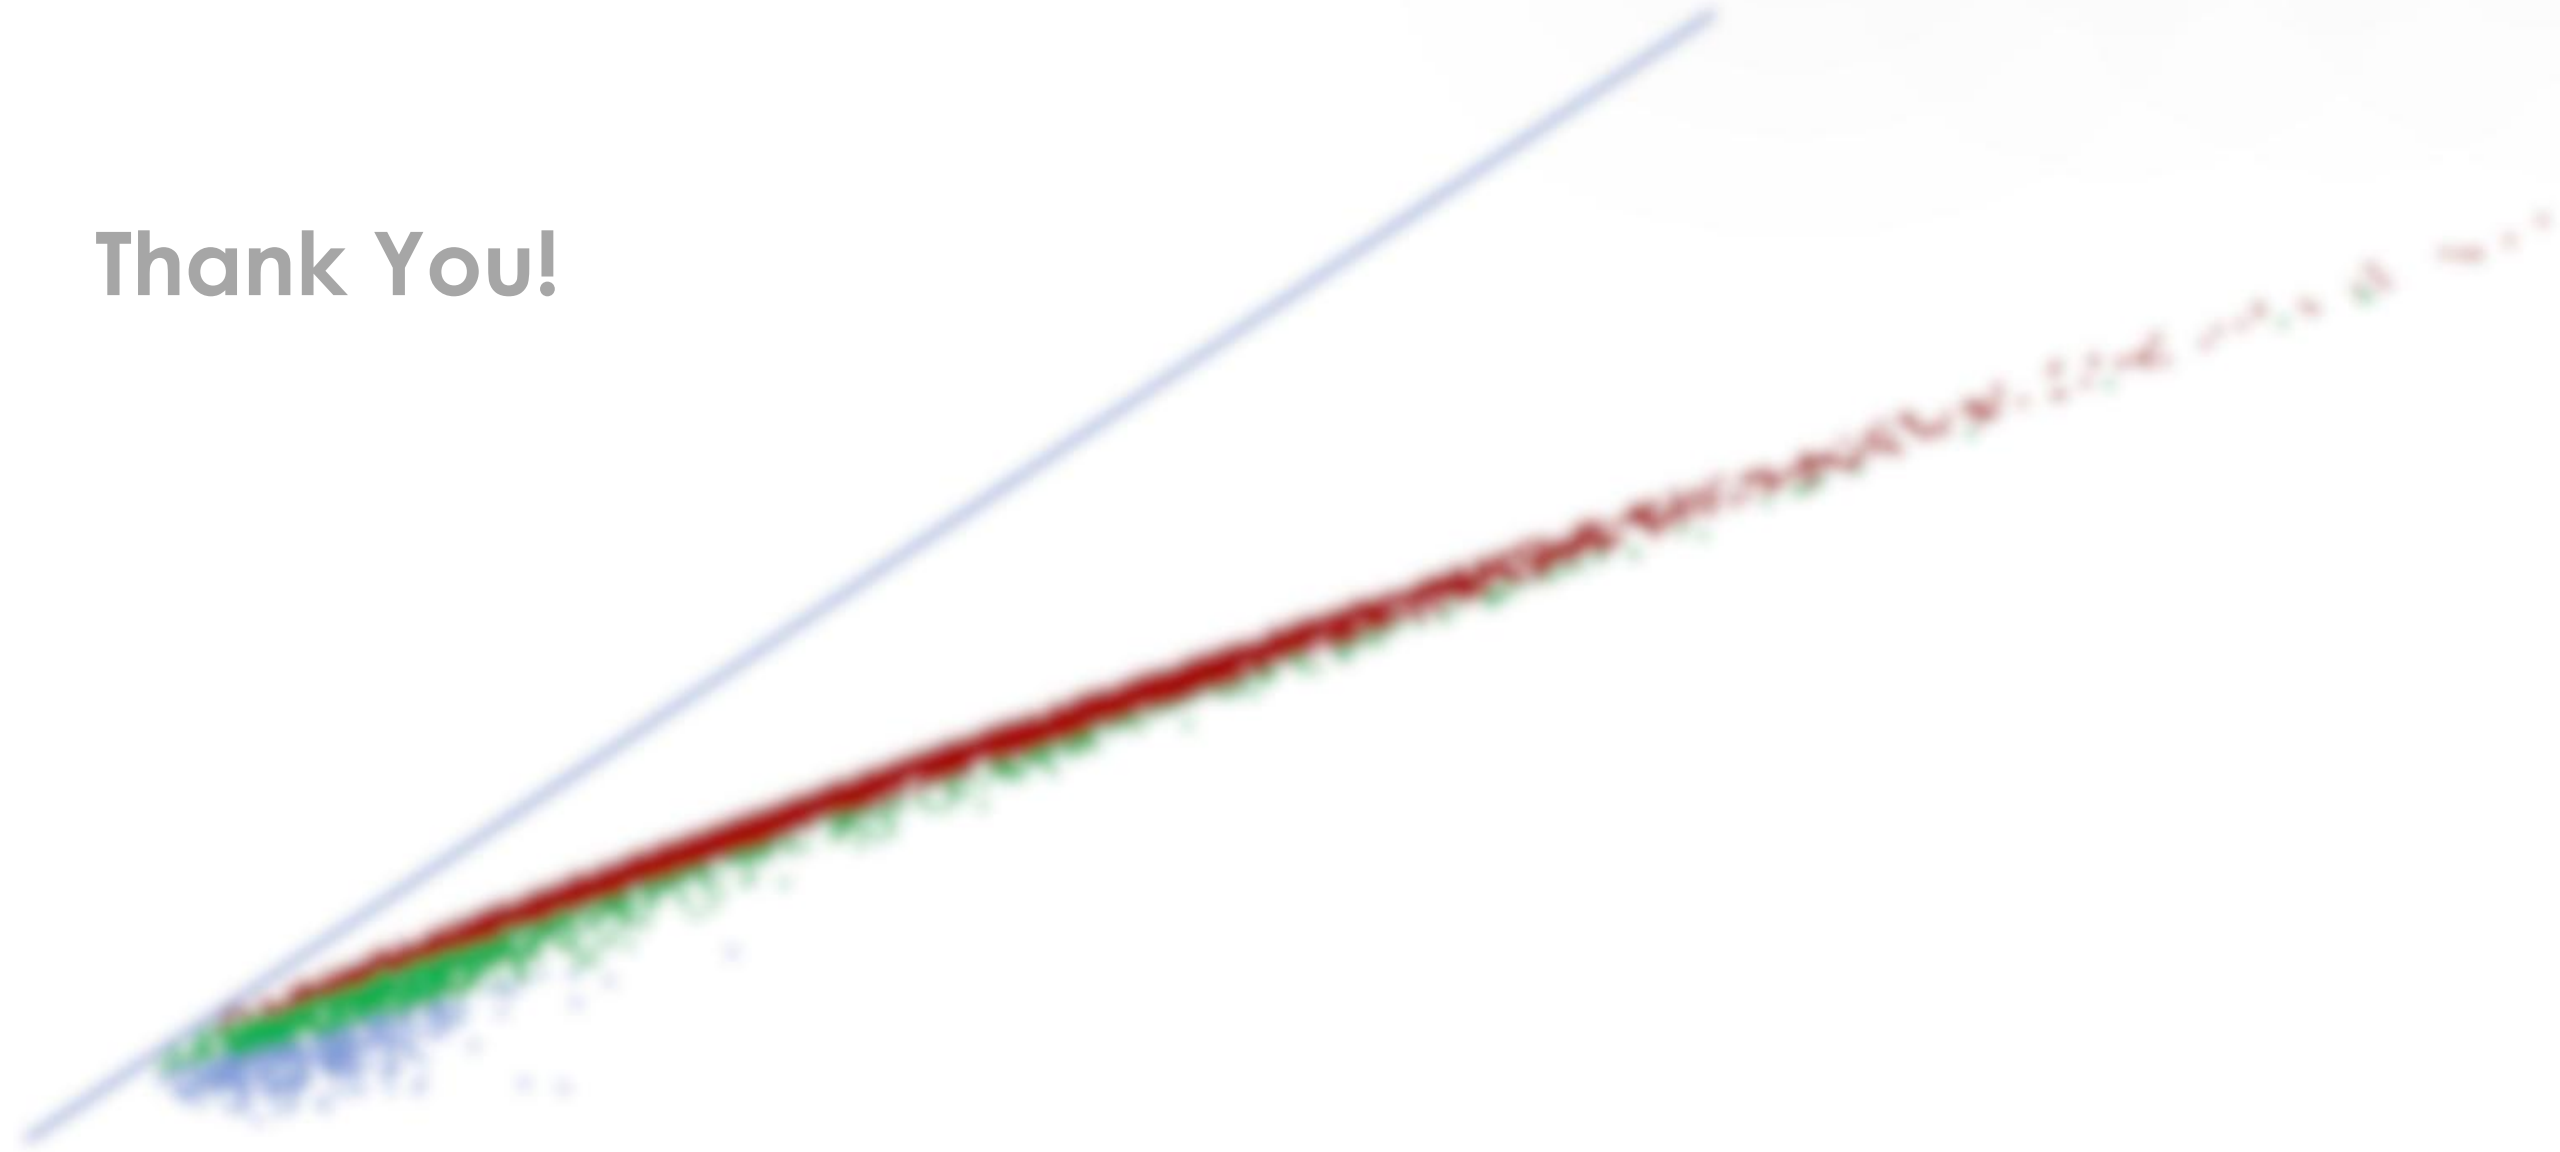

Using This Analysis

- Analyzing volatility across different economic releases helps identify patterns in market reactions.
- This approach allows for evaluating the significance of economic indicators based on their market impact.
- Adhering to standard trading guidelines, the risk amount should not exceed 5% of the trading balance, typically. A risk-reward ratio of 1:1.5x or greater, guided by the win ratio and historical data from this presentation or other estimates, can be used to determine the appropriate risk level, take-profit point, and position size.
- Trade automation on the MT5/MT4 platform can be implemented using the expert advisor linked below, which takes the specified parameters as input.
- An MT5/MT4 account can be accessed through a [brokerage/securities dealer firm](#) or by using a [proprietary \(prop\) trading account](#).*
- **Example:**
 - Volatility analysis of economic releases, such as the CPI event, helps identify patterns in market reactions. For instance, if the CPI event typically results in a minimum movement of 0.5x and a maximum movement of 3x, a stop-loss of 1x and a take-profit of 3x can be strategically applied.
 - Following prudent risk management, the risk per trade should not exceed 5% of the trading balance, typically. For a \$100,000 trading account (max loss amount post which trading is halted), this translates to a \$5,000 stop-loss and a \$15,000 take-profit.
 - The guiding principle is that a win ratio of at least 50% combined with a risk-reward ratio of over 1.5 ensures positive expected cash flow. By limiting risk to 5% of the account balance, potential drawdowns from consecutive losses are minimized, preserving capital and maintaining positive cash flow expectations.
- If you need further assistance, please don't hesitate to contact us.
- **Disclaimer: The links are provided for informational purposes only and connect to third-party websites. We are not affiliated with, nor do we endorse, any of these external sites. Trading carries a significant risk of financial loss. Your risk is your own responsibility, and you should carefully consider your investment objectives and risk tolerance before trading.*
