GBP - Unemployment Rate

GBP - Unemployment Rate

Event	GBP - Unemployment Rate			Description
Actual:				Bloomberg estimates that unemployment could remain steady at 4.3%, while wages excluding bonuses may decline from 5.2% in October to 5.0% in November. It should be noted that the decrease in wages is a key factor easing inflation, potentially paving the way for the Bank of England's Monetary Policy Committee to cut interest rates further this year. Such a move could weaken the pound against other major currencies. Conversely, stronger-than-expected wage growth could signal persistent inflation, limiting rate cuts and boosting the pound's performance against other currencies. Learn More: GBPJPY GBPCAD

CAD - Common CPI (YoY)

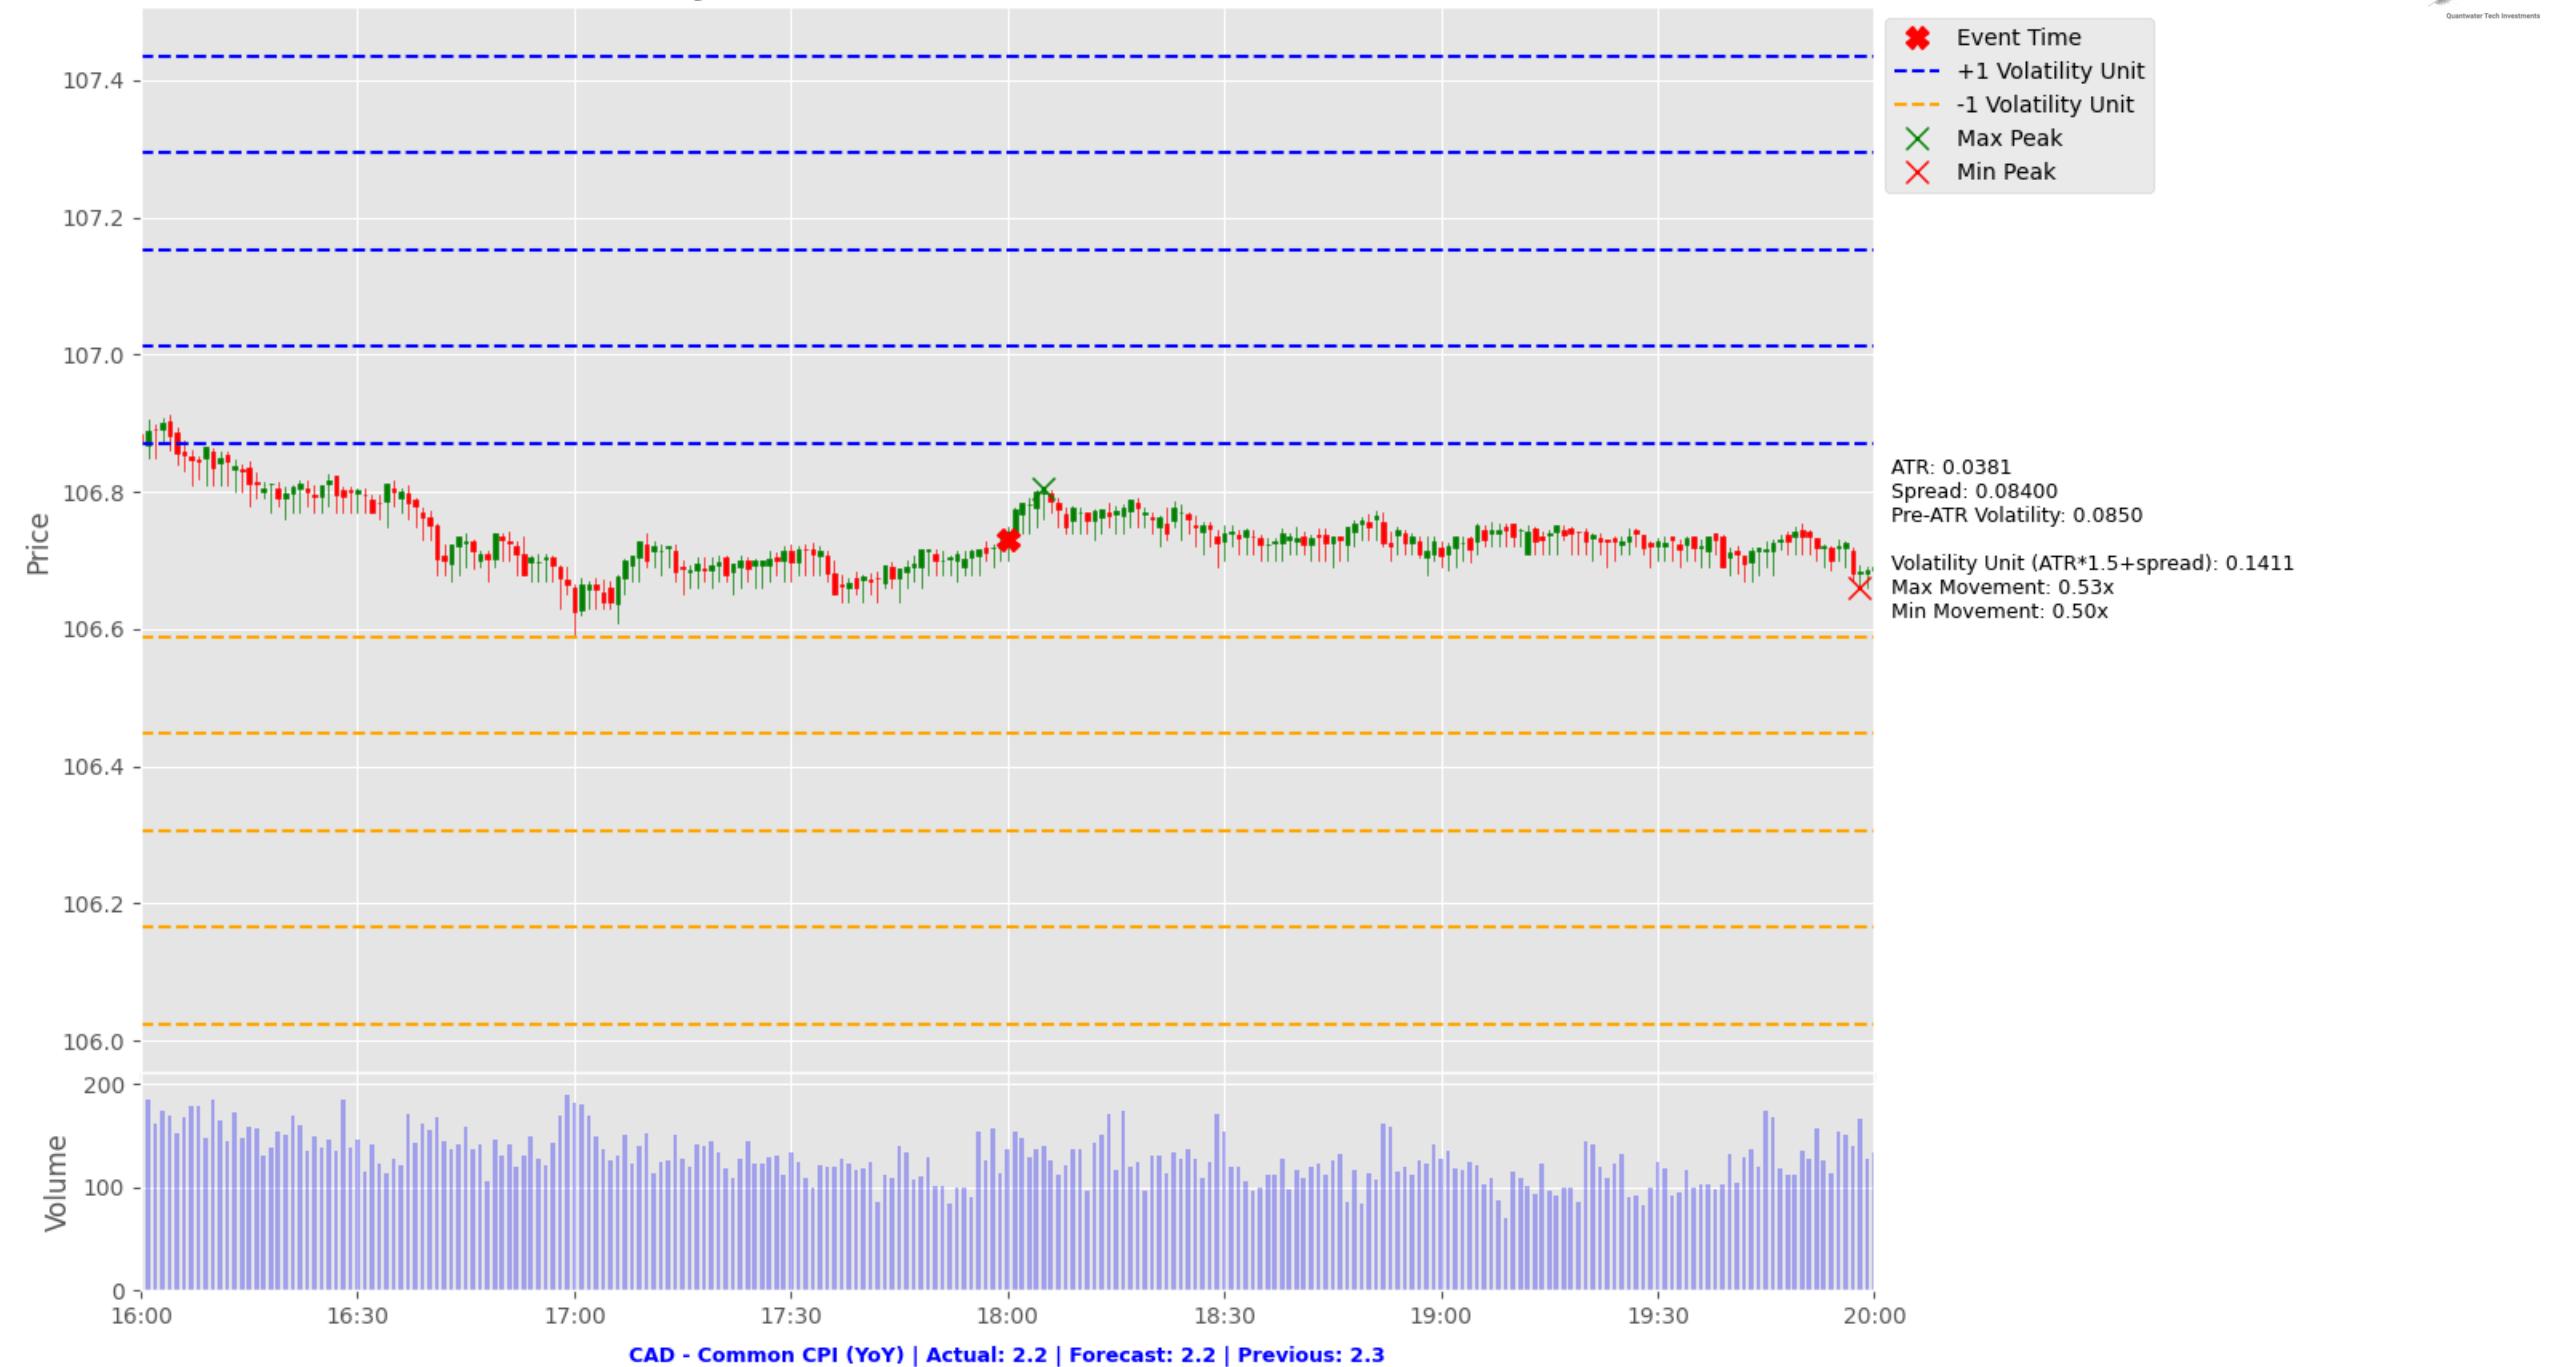

CAD - Common CPI (YoY)

Event	CAD - Common CPI (YoY)			Description
Actual:				December's Conusmer Price Index will also be released, with Bloomberg predicting the YoY inflation headline to edge lower from 1.9% in November to 1.8% in December. Last year, the Bank of Canada reduced interest rates from 5% to 3.25%. Continued declines in inflation could set the stage for additional cuts this year. Notably, Canadian officials have hinted at further rate reductions in response to US tariffs proposed by incoming President Trump, aimed at pressuring Canada politically. Learn More: CADJPY GBPCAD

NZD - CPI (QoQ) (Q4)

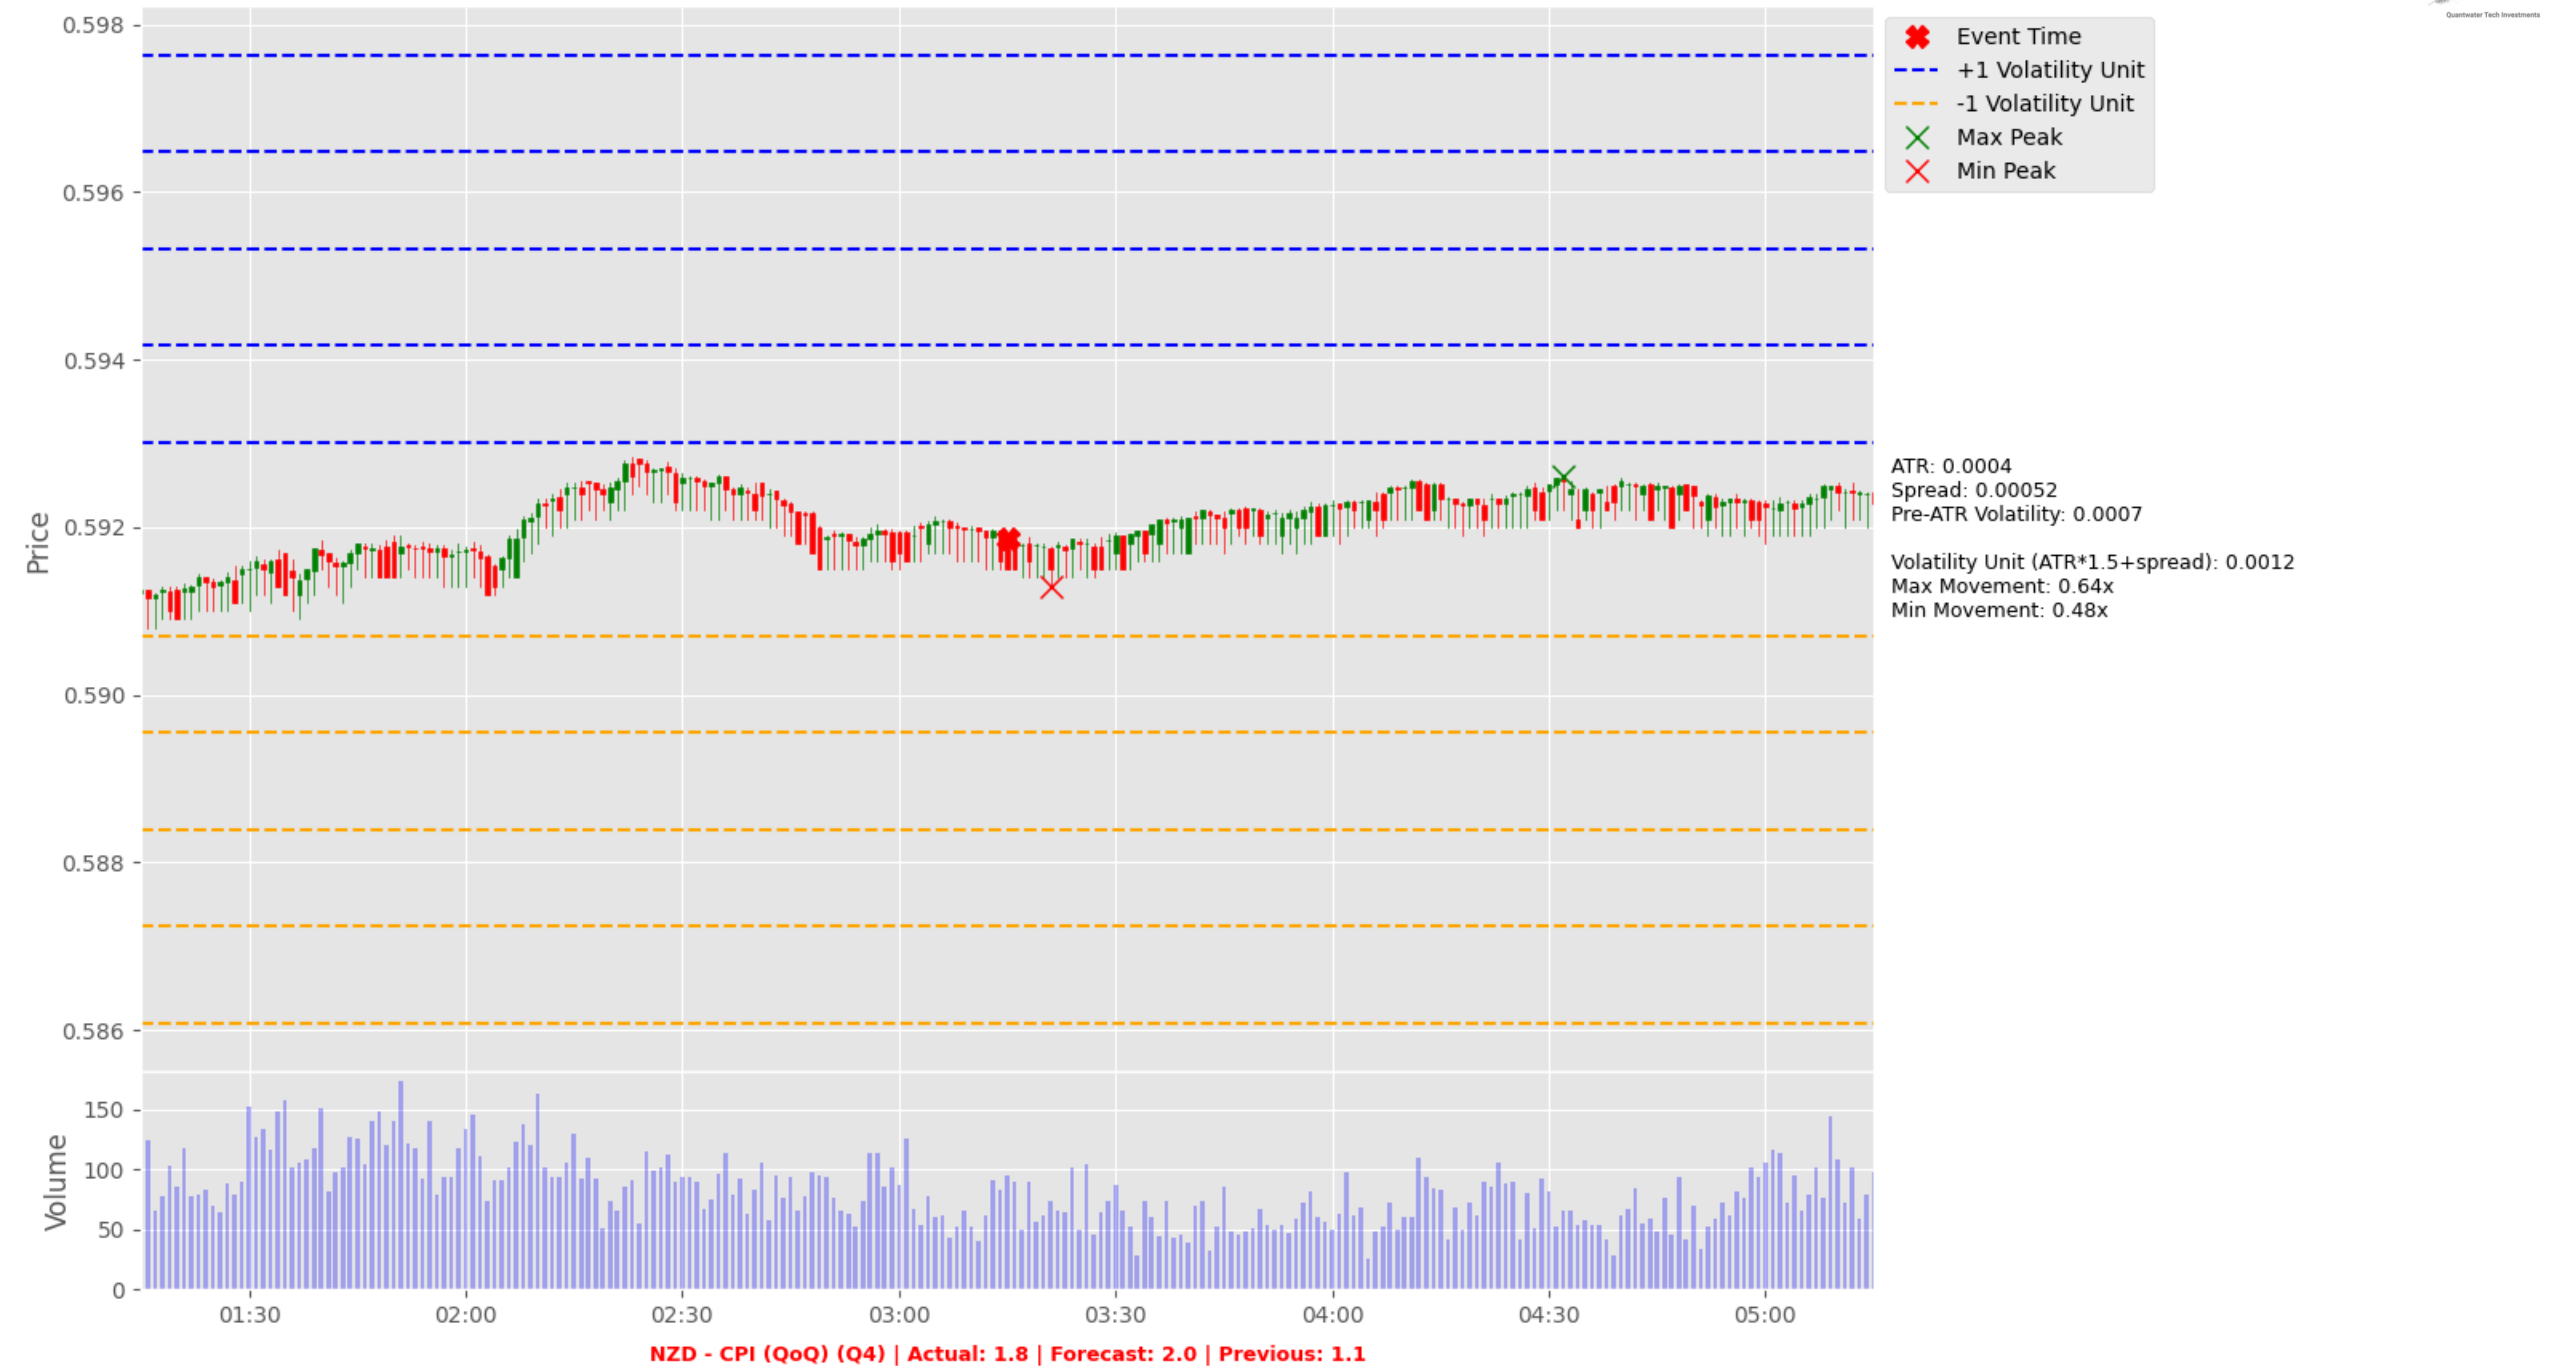

NZD - CPI (QoQ) (Q4)

Event	NZD - CPI (QoQ) (Q4)			Description
Actual:				According to Bloomberg, New Zealand's YoY inflation headline is expected to decrease slightly, from 2.2% in the third quarter to 2.1% in the fourth quarter. This decline could enable the Reserve Bank of New Zealand to continue its monetary easing, following last year's interest rate cuts from 5.5% to 4.25%. However, a higher-than-expected rise in inflation could slow the Reserve Bank's rate-cutting trajectory, potentially boosting the value of the New Zealand dollar against major currencies like the US dollar. US - Initial Jobless Claims

US - Initial Jobless Claims

Event	US - Initial Jobless Claims			Description
Actual:				Initial Jobless Claims measures the number of people who filed for unemployment insurance for the first time during the past week. This is the most timely U.S. economic data, but the market impact varies from week to week. A reading that is higher than forecast is generally negative (bearish) for the USD, while a lower than forecast reading is generally supportive (bullish) for the USD. Learn More: USDJPY EURUSD

US - Crude Oil Inventories

US - Crude Oil Inventories

Event	US - Crude Oil Inventories			Description
Actual:				The Energy Information Administration's (EIA) Crude Oil Inventories measures the weekly change in the number of barrels of commercial crude oil held by US firms. The level of inventories influences the price of petroleum products, which can have an impact on inflation. If the increase in crude inventories is more than expected, it implies weaker demand and is bearish for crude prices. The same can be said if a decline in inventories is less than expected. If the increase in crude is less than expected, it implies greater demand and is bullish for crude prices. The same can be said if a decline in inventories is more than expected. JPY - BoJ Interest Rate Decision

JPY - BoJ Interest Rate Decision

Event	JPY - BoJ Interest Rate Decision			Description
Actual:				Bank of Japan (BOJ) policy board publishes its decision about where to set the target overnight rate. As short term interest rates are an important determinant of currency valuation, traders watch interest rate changes closely. A reading that is stronger than forecast is generally supportive (bullish) for the JPY, while a weaker than forecast reading is generally negative (bearish) for the JPY. Learn More:USDJPY EURJPY

US - Manufacturing PMI P

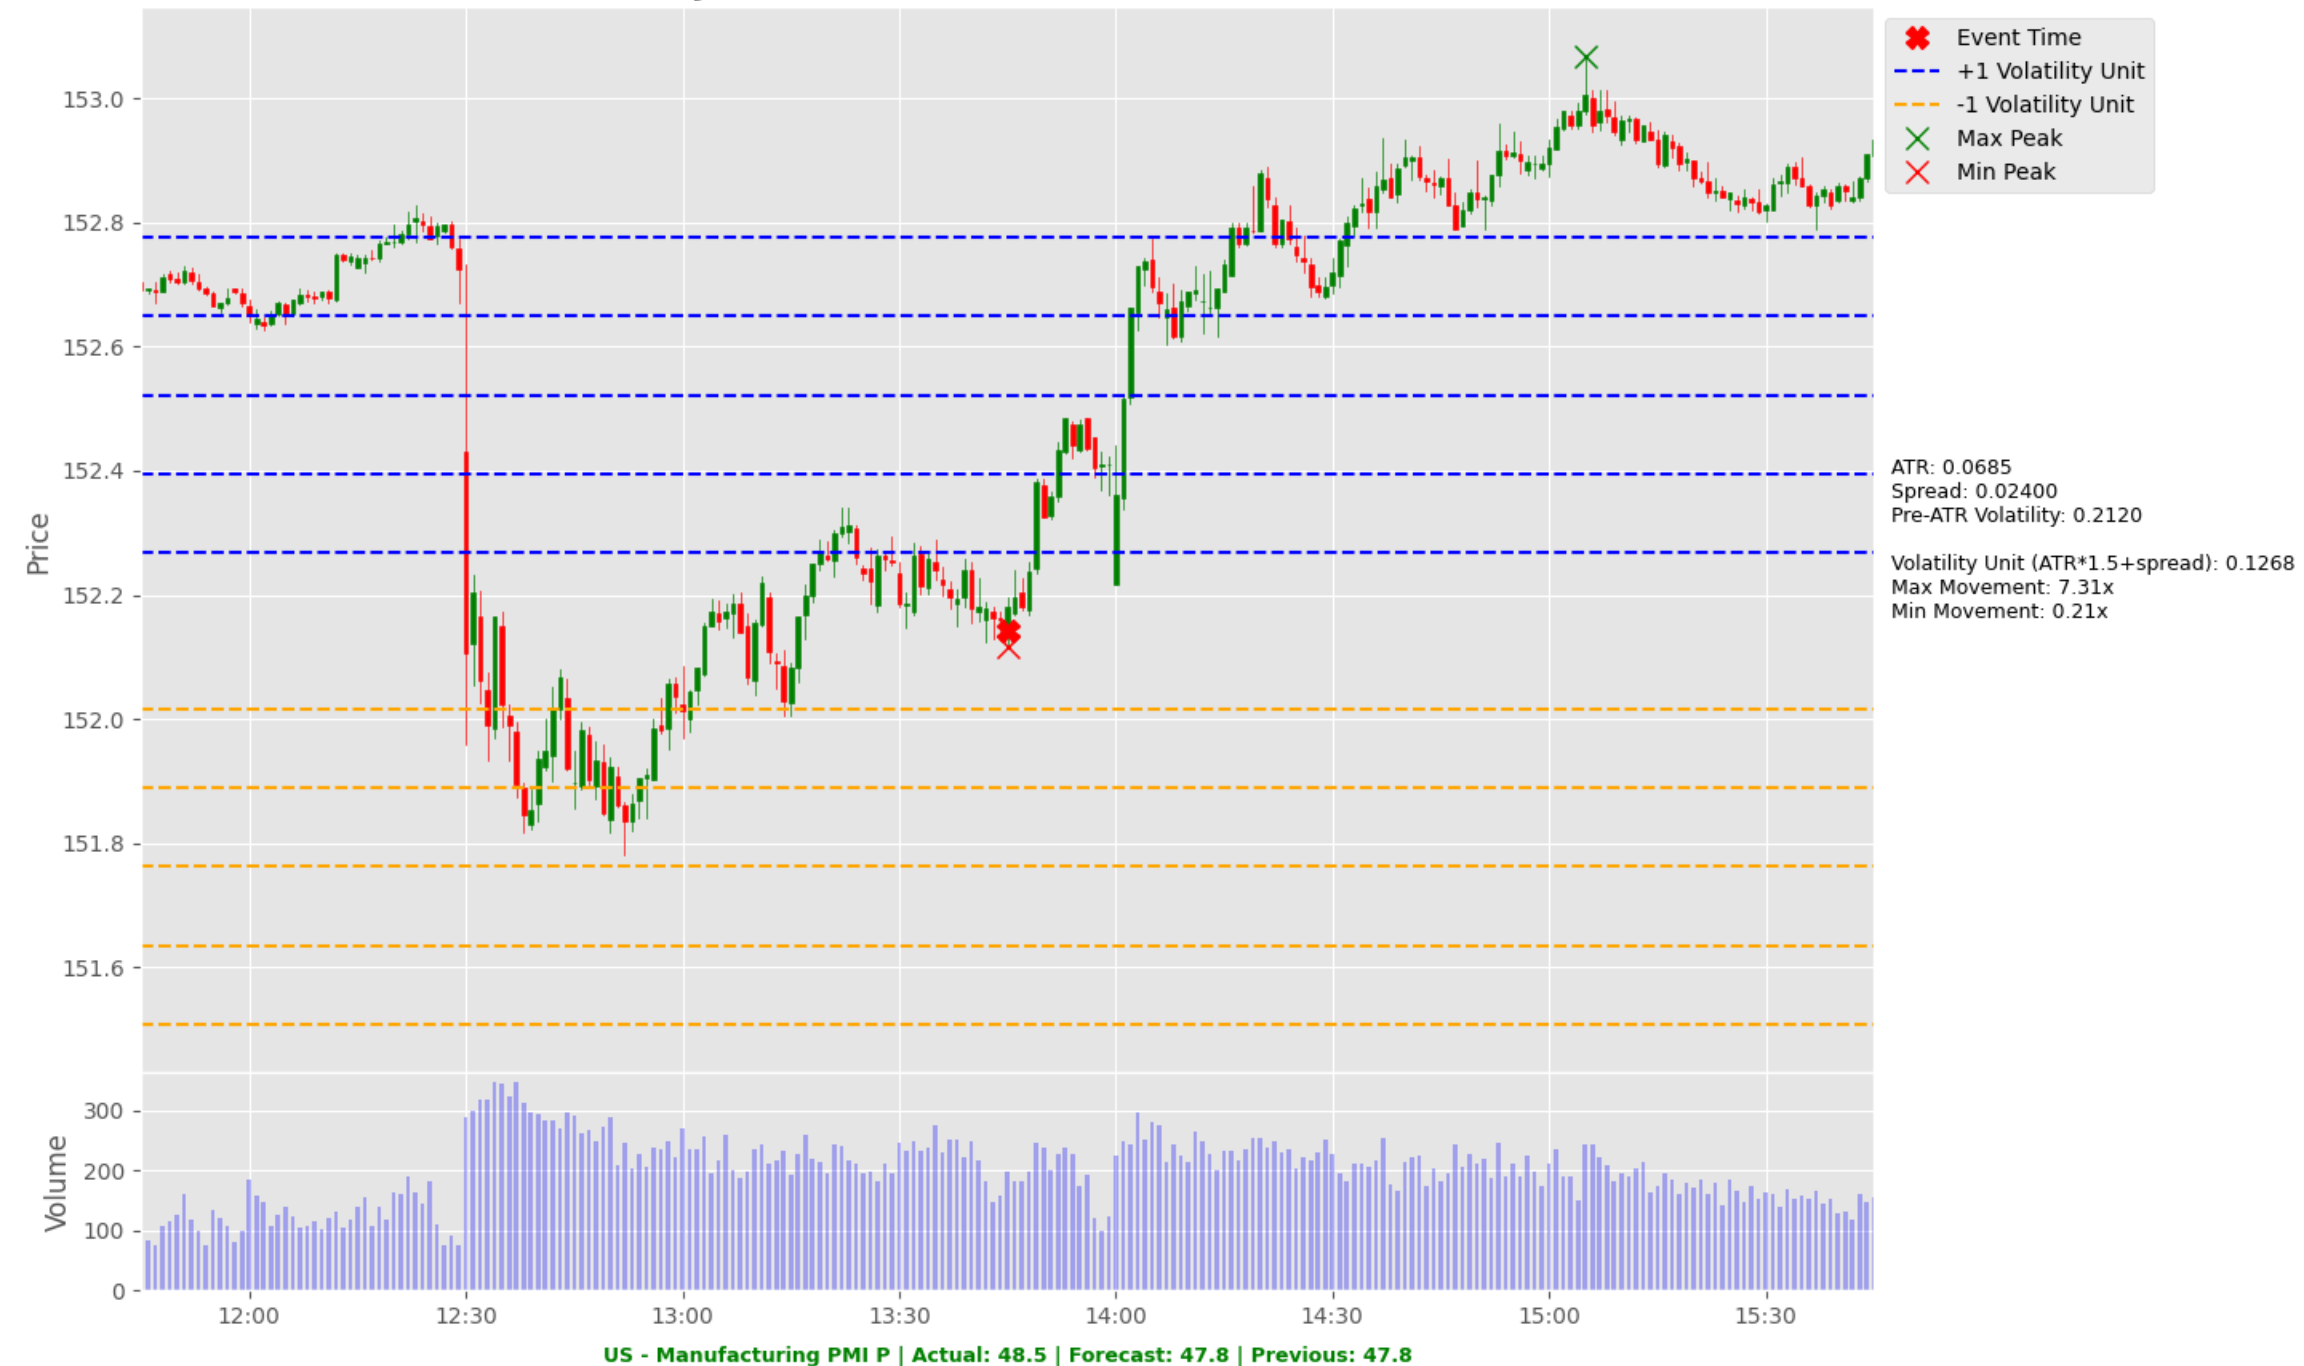

US - Manufacturing PMI P

Event	US - Manufacturing PMI P			Description
Actual:				Since the beginning of Q3 last year, the PMI has been in contraction territory (below 50). Bloomberg forecasts the index to slightly improve from 49.4 to 49.6. Any reading above expectations would signal progress toward exiting the contraction zone, positively impacting the US GDP for Q4 and bolstering stock indices like the Dow Jones Industrial Average (US30). US - Services PMI P

US - Services PMI P

Event	US - Services PMI P			Description
Actual:				The Service PMI release is published monthly by Markit Economics. The data are based on surveys of over 400 executives in private sector service companies. The surveys cover transport and communication, financial intermediaries, business and personal services, computing & IT, hotels and restaurants. An index level of 50 denotes no change since the previous month, while a level above 50 signals an improvement, and below 50 indicates a deterioration. A reading that is stronger than forecast is generally supportive (bullish) for the USD, while a weaker than forecast reading is generally negative (bearish) for the USD. Learn More:USDJPY EURUSD

Appendix: Key Economic & Analytical Concepts

Economic Data Interpretation

- **Forecast Vs. Actual:** Comparing predicted values with released data
- **Previous Reading:** Last reported value, used as a benchmark
- **Market Impact:** How releases affect financial markets

Average True Range (ATR)

- **Definition:** A technical indicator that measures market volatility
- **Calculations:**
 - Calculate True Range (TR) for each period:
 - $TR = \max [(high - low), abs(high - previous\ close), abs(low - previous\ close)]$
 - $ATR = \text{Simple moving average of TR over } N \text{ periods (typically 14)}$
- **Interpretation:**
 - Higher ATR = Higher Volatility
 - Lower ATR = Lower Volatility
- **Usage in Our Analysis:**
 - Helps standardize price movements across different market conditions
 - Forms the basis of our Volatility Unit Calculations

Volatility Unit

- **Formula:** $(ATR * multiple) + Spread$ (multiple is typically 1.5)
- **Purpose:** Standardizes price movements

Price Movements

- **Max Movement:** Largest upward price move after event
- **Min Movement:** Largest downward price move after event
- Both measured in Volatility Units

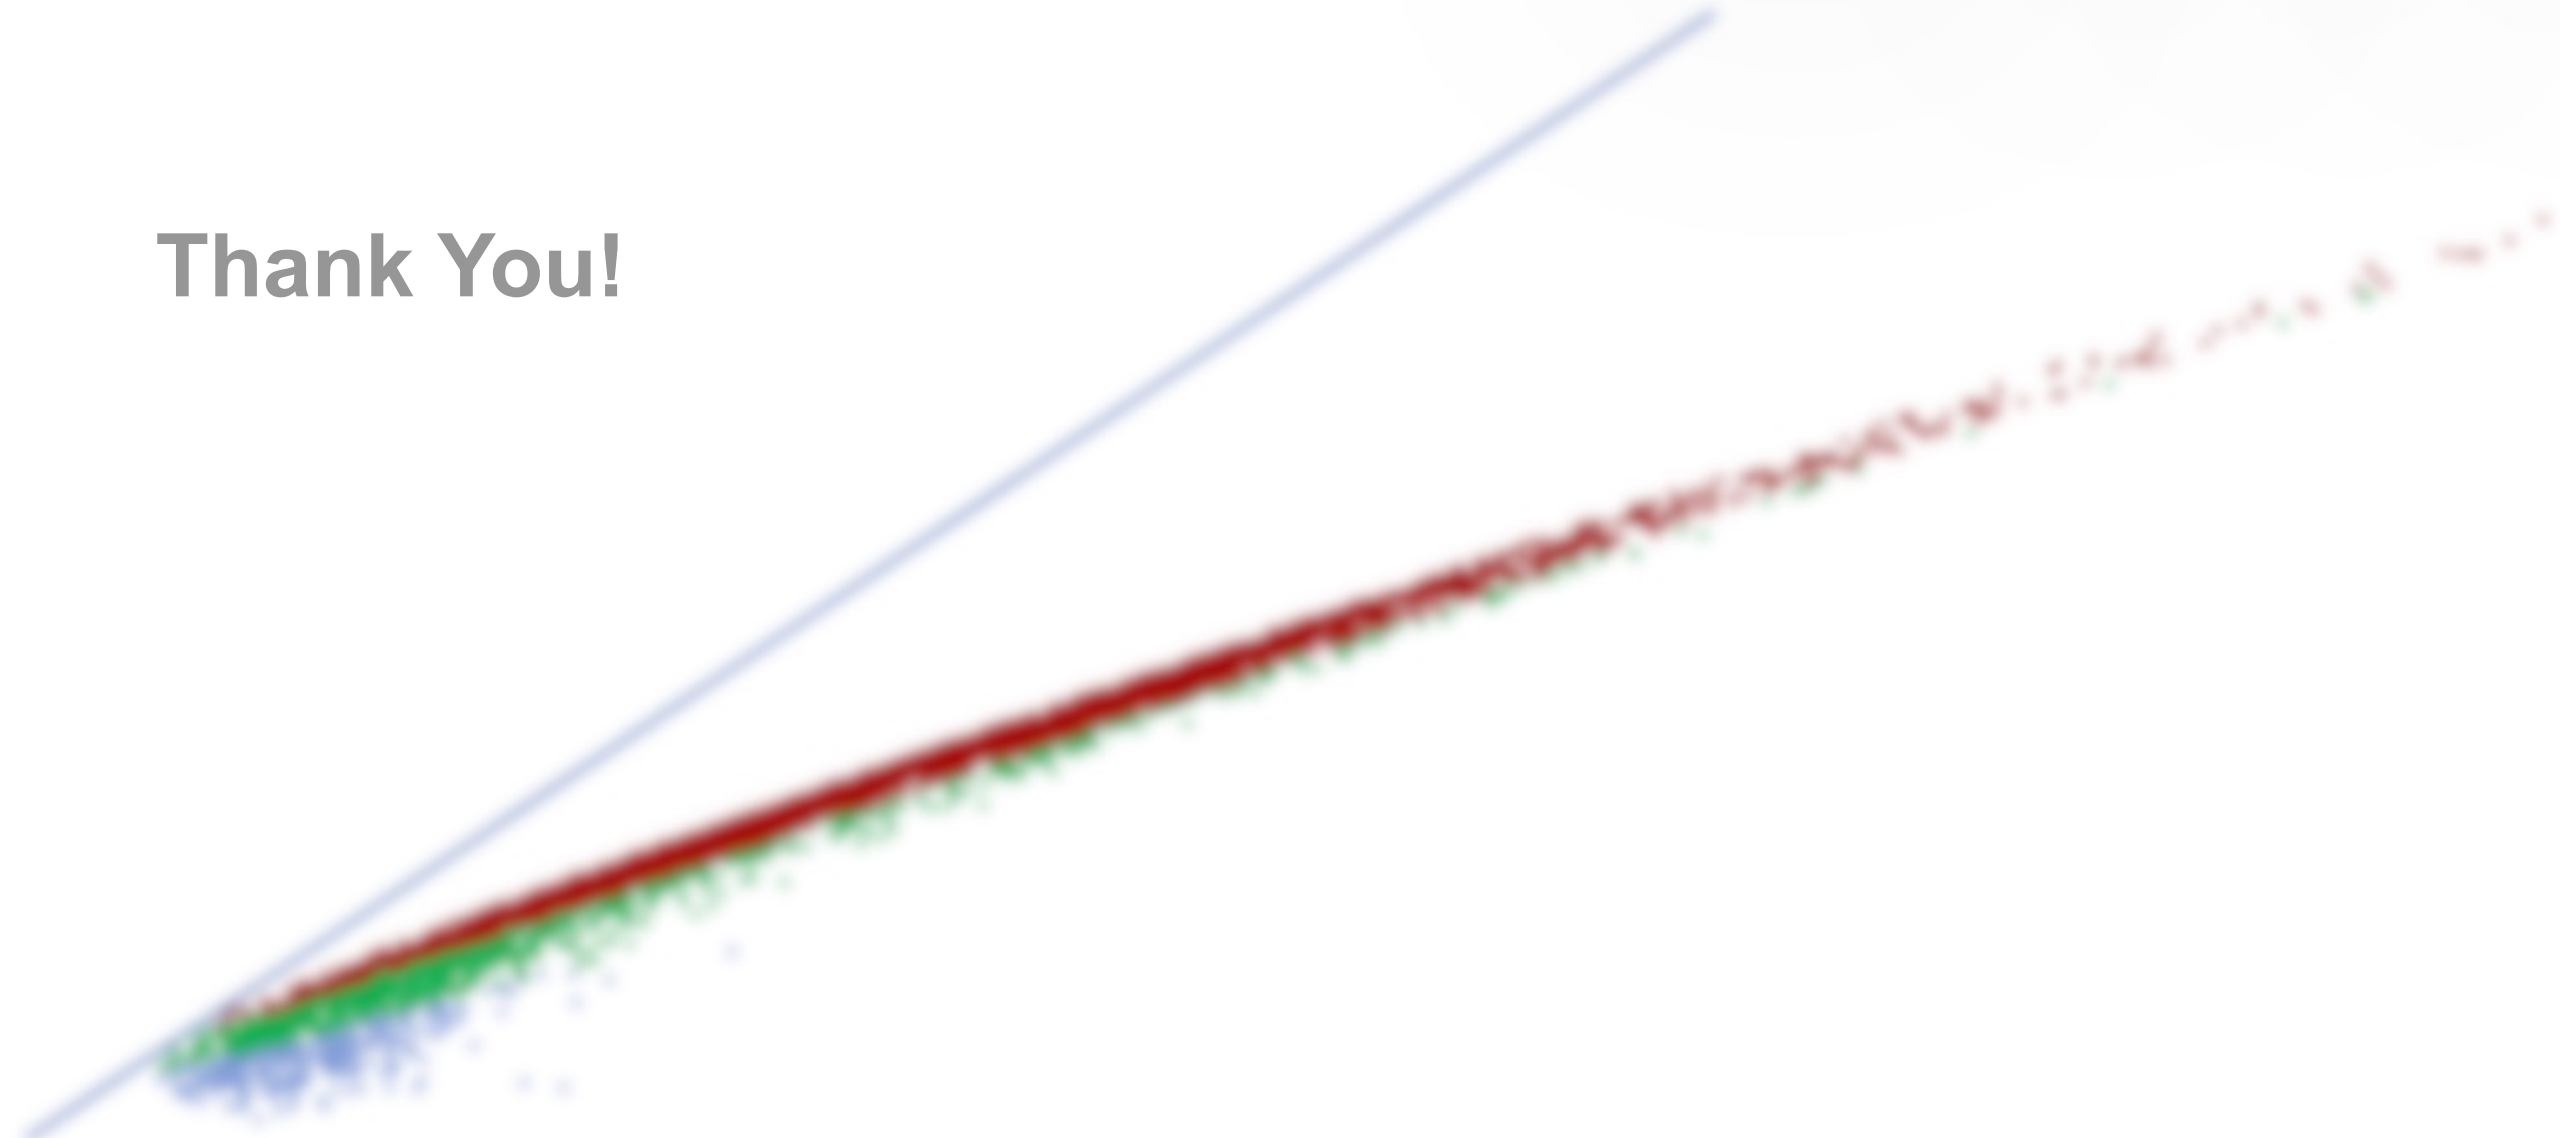

Using This Analysis

- Analyze volatility across different economic releases
- Identify patterns in market reactions
- Assess importance of economic indicators based on market impact
