GDP (QoQ) (Q3)

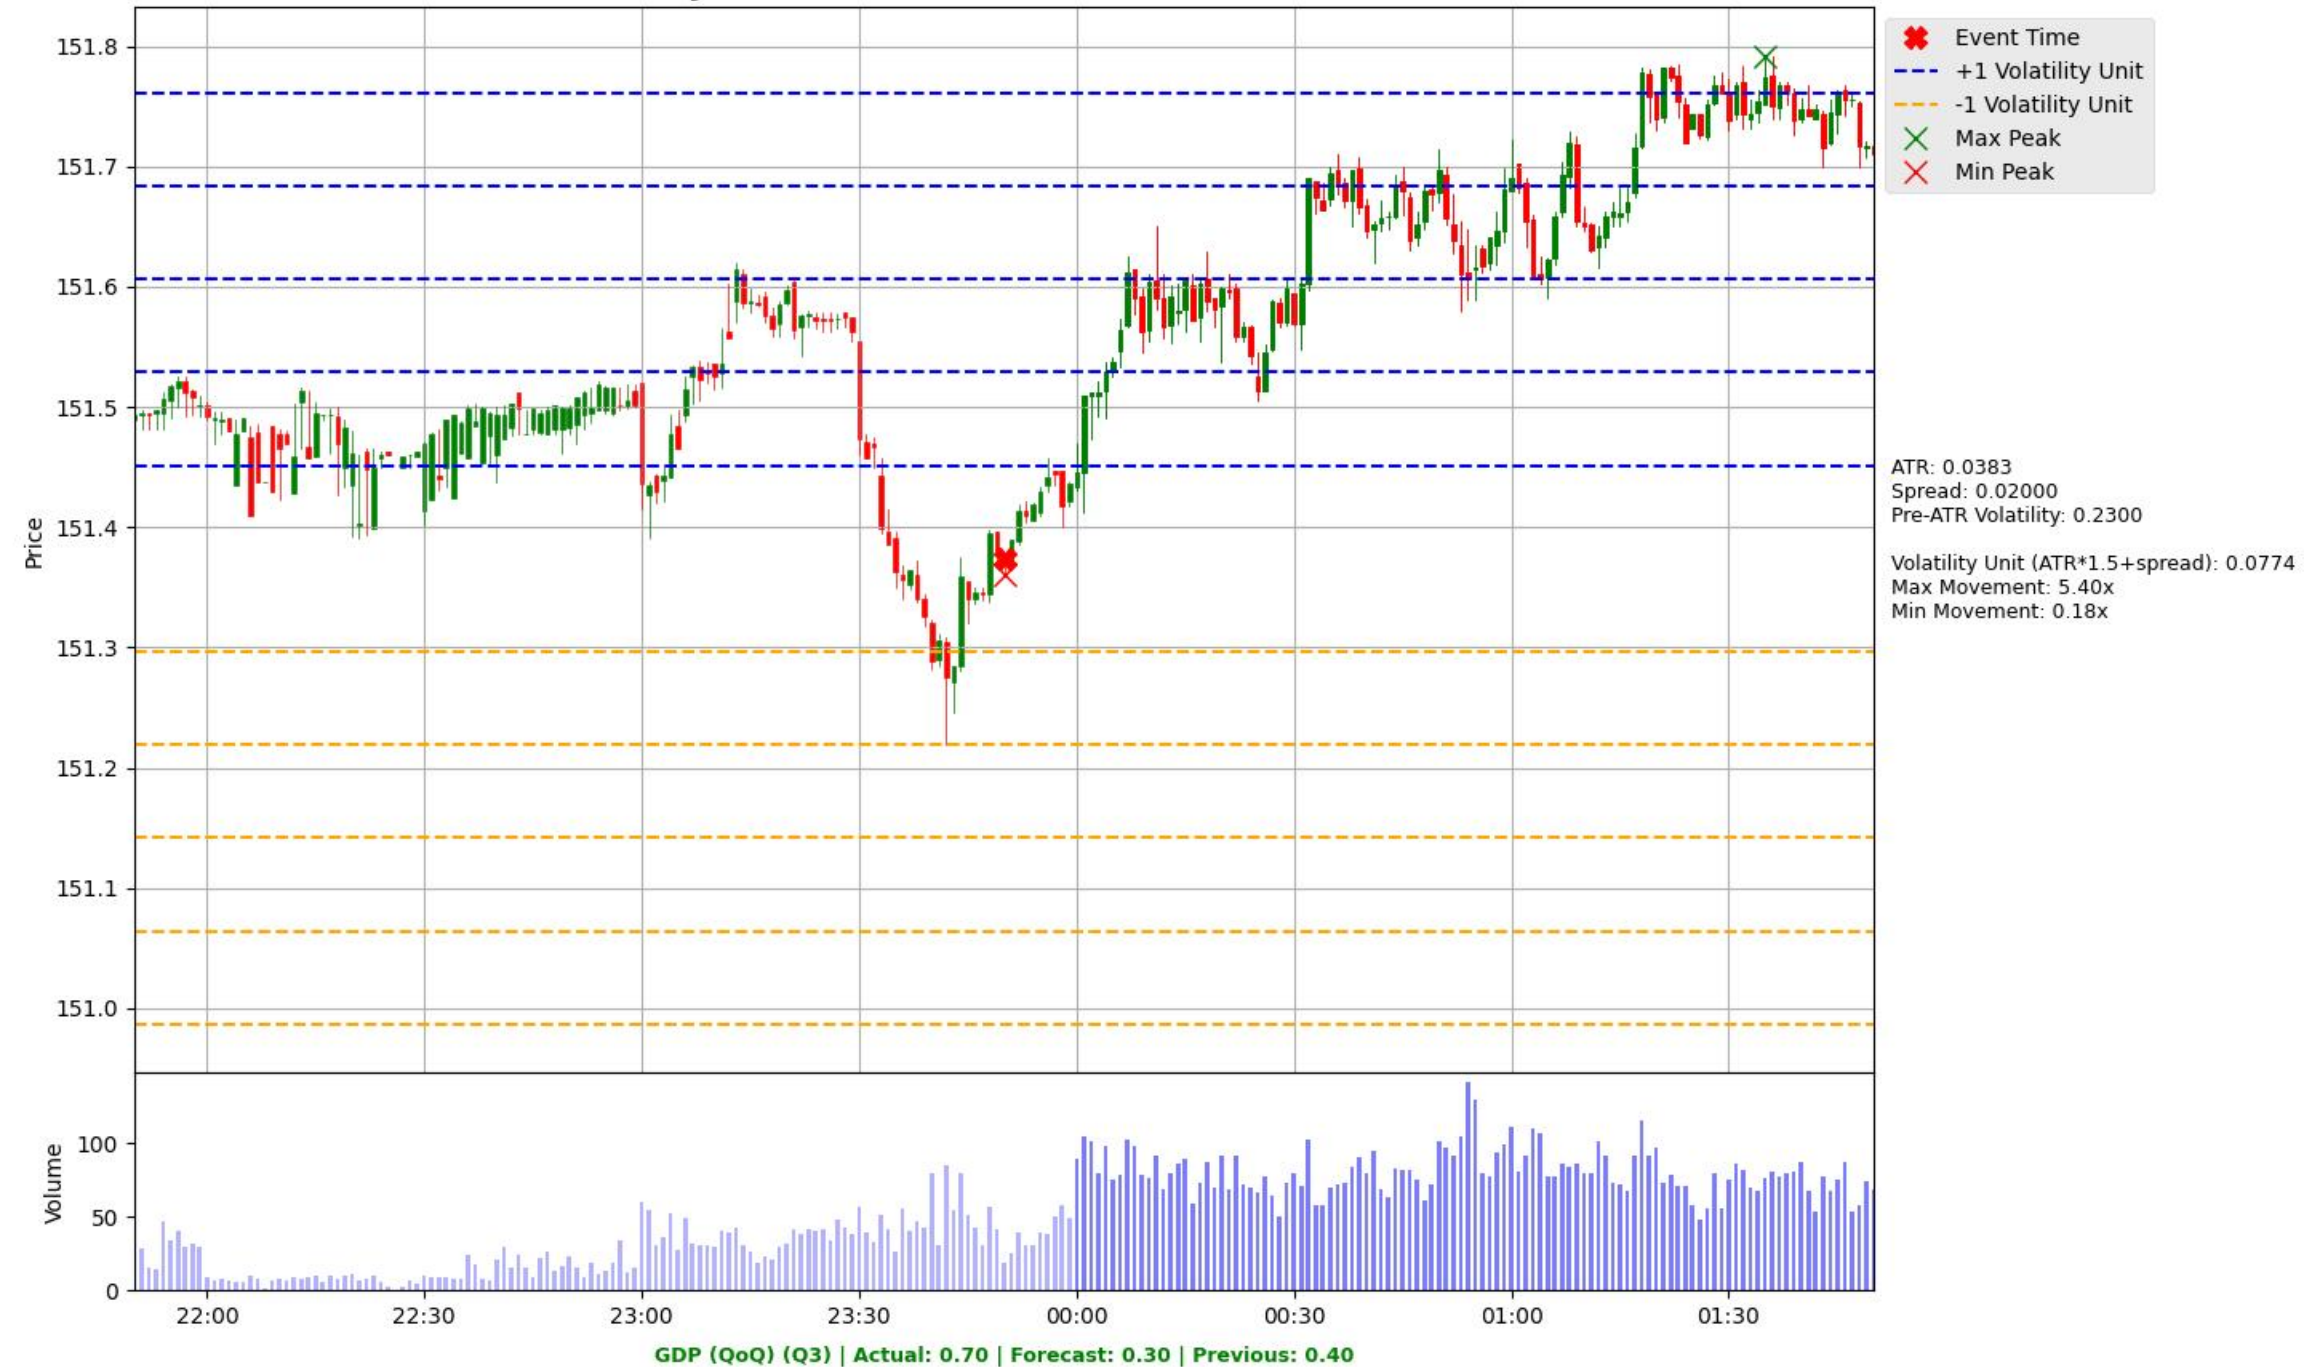

GDP (QoQ) (Q3)

Event	GDP (QoQ) (Q3)			Description
Actual:				Gross Domestic Product (GDP) measures the change in the inflation-adjusted value of all goods and services produced by the economy. It is the broadest measure of economic activity and the primary indicator of the economy's health. A higher than expected reading should be taken as positive/bullish for the JPY, while a lower than expected reading should be taken as negative/bearish for the JPY. Learn More: USDJPY EURJPY

Crude Oil Inventories

Crude Oil Inventories

Event	Crude Oil Inventories			Description
Actual:				The Energy Information Administration's (EIA) Crude Oil Inventories measures the weekly change in the number of barrels of commercial crude oil held by US firms. The level of inventories influences the price of petroleum products, which can have an impact on inflation. If the increase in crude inventories is more than expected, it implies weaker demand and is bearish for crude prices. The same can be said if a decline in inventories is less than expected. If the increase in crude is less than expected, it implies greater demand and is bullish for crude prices. The same can be said if a decline in inventories is more than expected. Learn More: USOILRoI

FOMC Meeting Minutes

FOMC Meeting Minutes

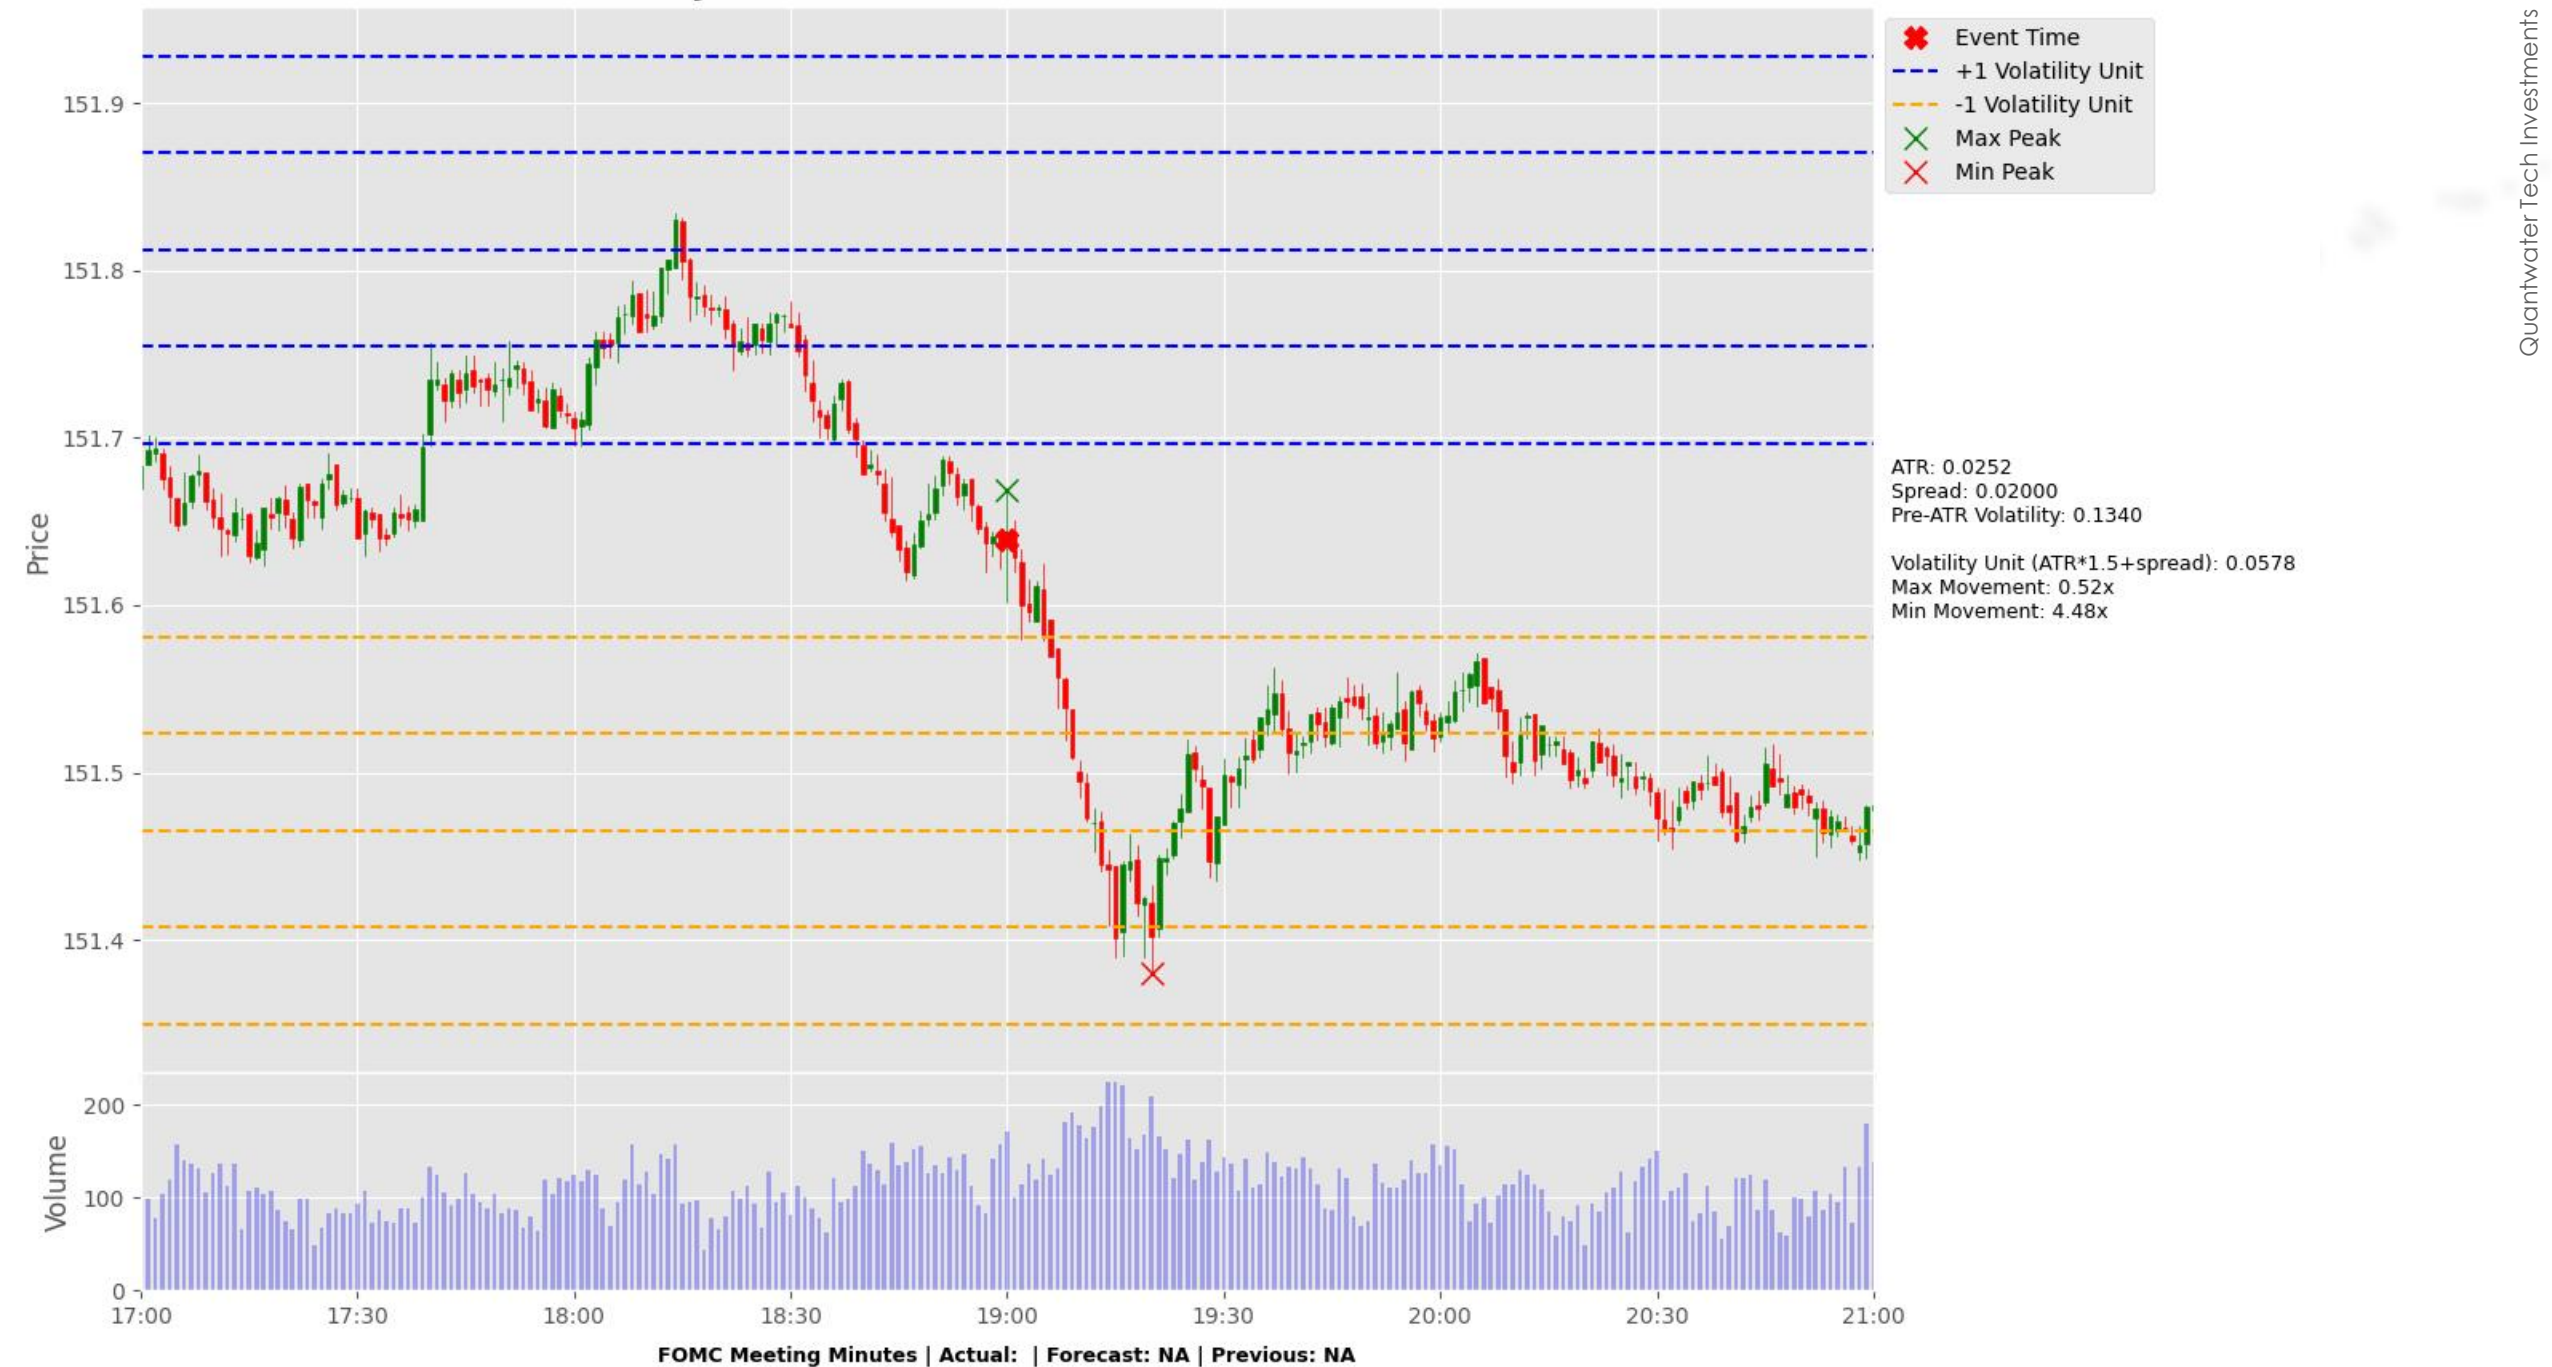

Event	FOMC Meeting Minutes			Description
Actual:				The Federal Open Market Committee (FOMC) Meeting Minutes are a detailed record of the committee's policy-setting meeting held about three weeks earlier. The minutes offer detailed insights regarding the FOMC's stance on monetary policy, so currency traders carefully examine them for clues regarding the outcome of future interest rate decisions. Philadelphia Fed Manufacturing Index (Nov)

Philadelphia Fed Manufacturing Index (Nov)

Event	Philadelphia Fed Manufacturing Index (Nov)			Description
Actual:				The Philadelphia Federal Reserve Manufacturing Index rates the relative level of general business conditions in Philadelphia. A level above zero on the index indicates improving conditions; below indicates worsening conditions. The data is compiled from a survey of about 250 manufacturers in the Philadelphia Federal Reserve district. A higher than expected reading should be taken as positive/bullish for the USD, while a lower than expected reading should be taken as negative/bearish for the USD. Lear More: USDJPY EURUSD

Existing Home Sales (Oct)

Existing Home Sales (Oct)

Event	Existing Home Sales (Oct)			Description
Actual:				Existing Home Sales measures the annualized number of residential buildings that were sold during the previous month, excluding new construction. It is a leading indicator of economic health as the sale of a home triggers a wide-reaching ripple effect. A higher than expected reading should be taken as positive/bullish for the USD, while a lower than expected reading should be taken as negative/bearish for the USD. Learn More: USDJPY EURUSD

S&P Global Manufacturing PMI (Nov)

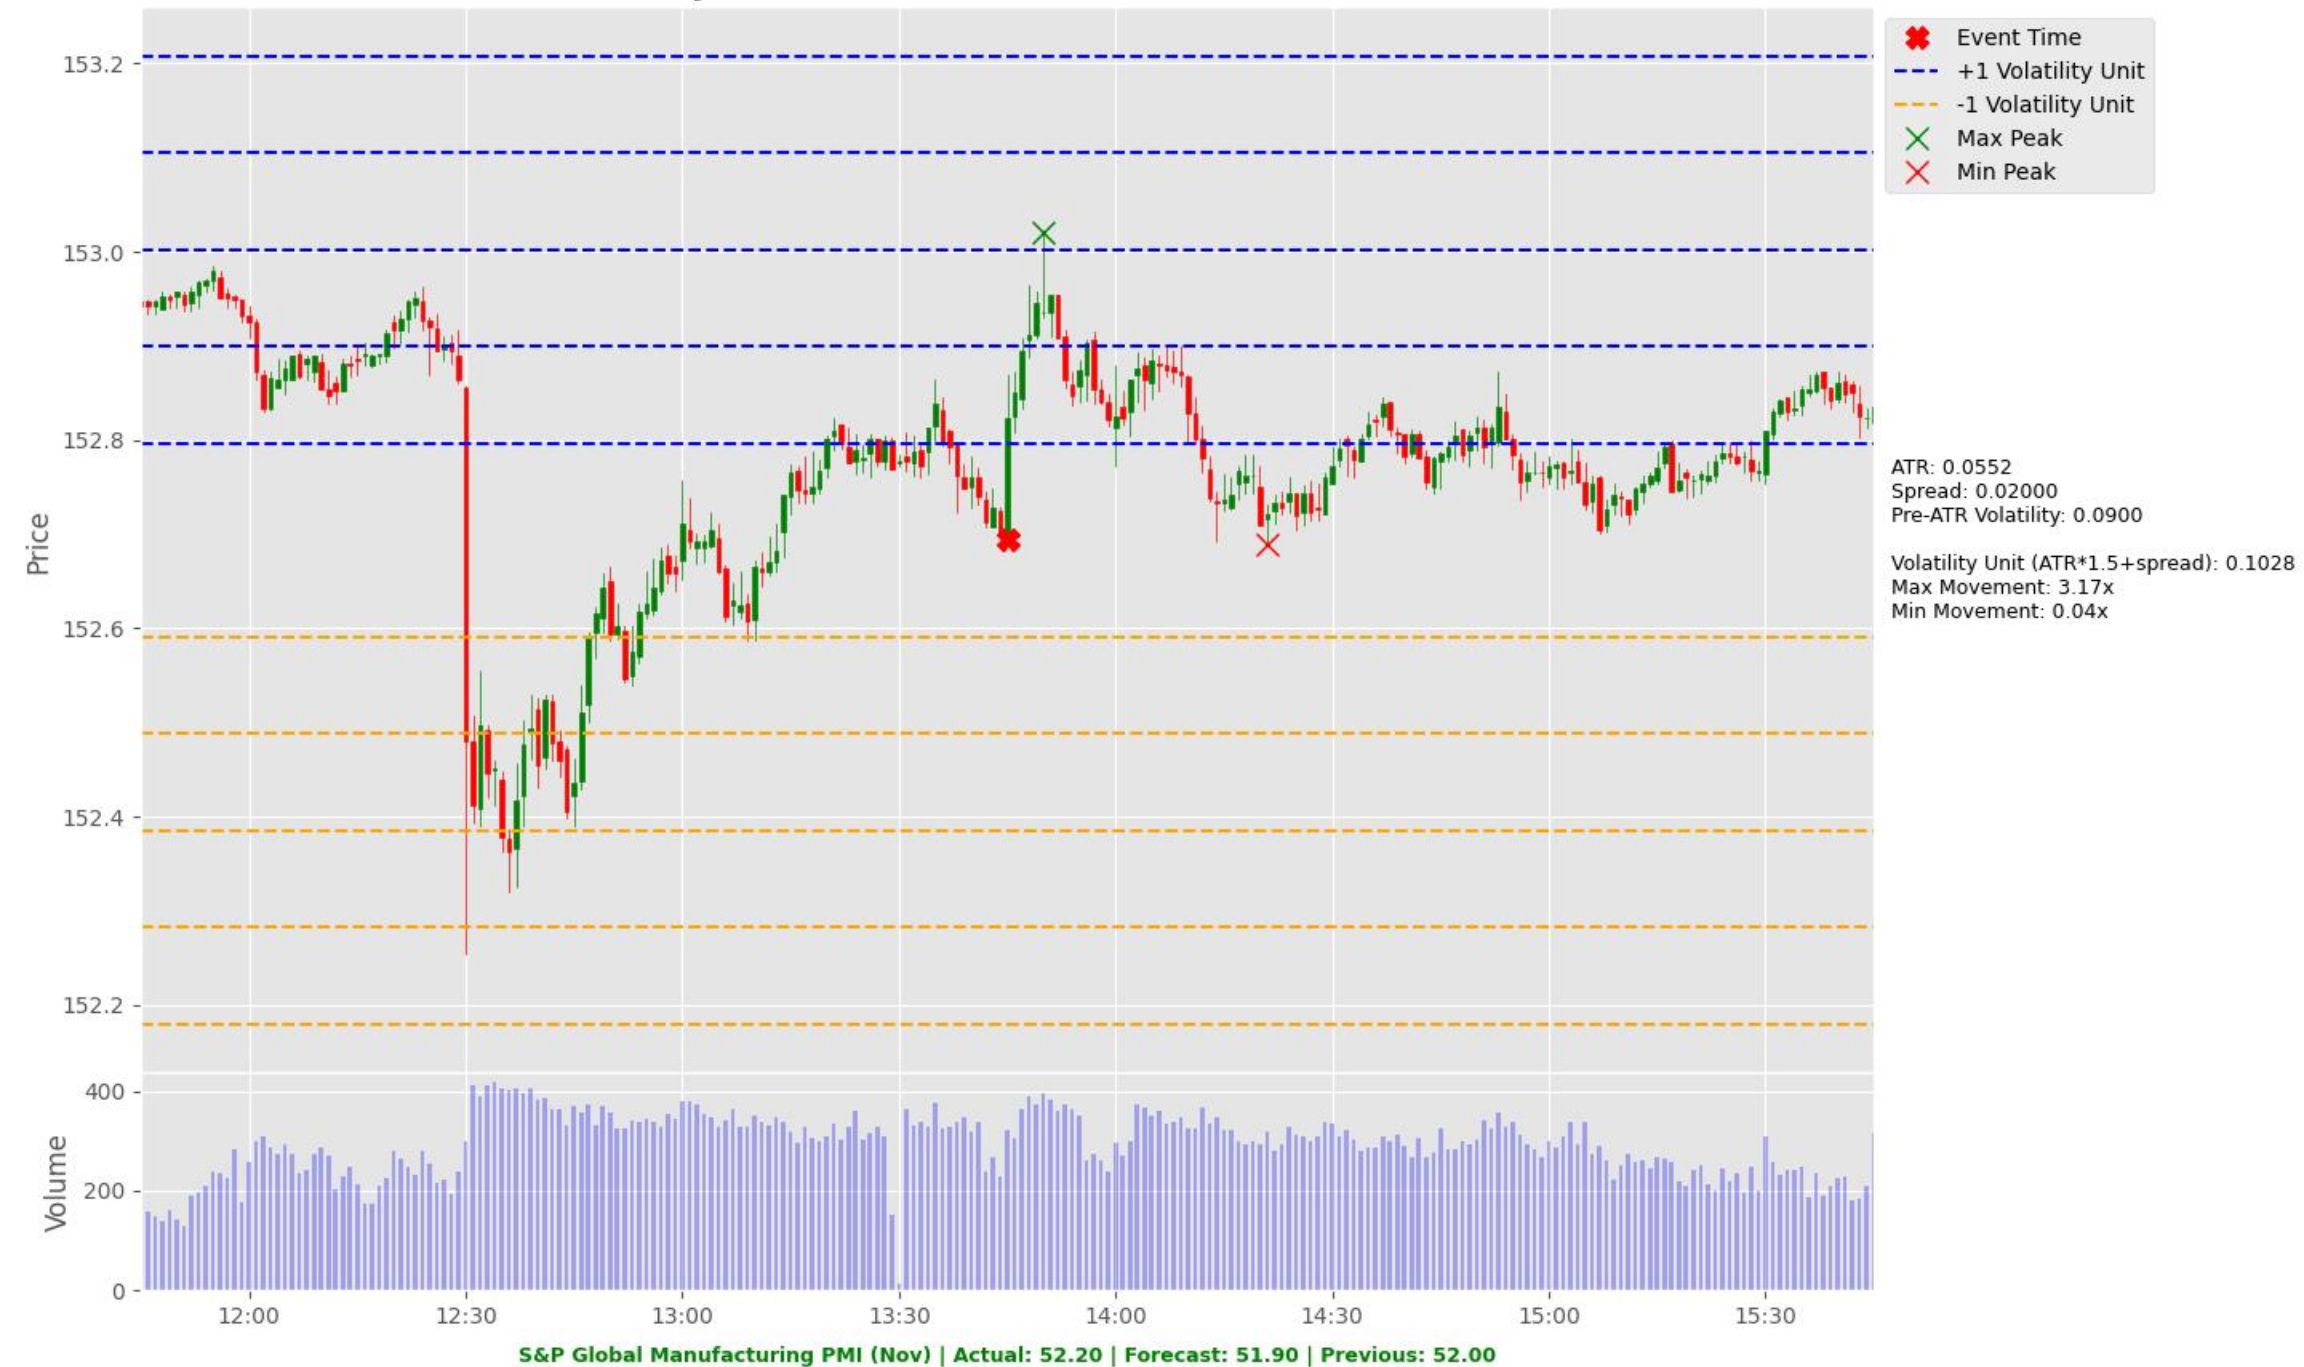

S&P Global Manufacturing PMI (Nov)

Event	S&P Global Manufacturing PMI (Nov)			Description
Actual:				The Manufacturing Purchasing Managers' Index (PMI) measures the activity level of purchasing managers in the manufacturing sector. A reading above 50 indicates expansion in the sector; below 50 indicates contraction. Traders watch these surveys closely as purchasing managers usually have early access to data about their company's performance, which can be a leading indicator of overall economic performance. A higher than expected reading should be taken as positive/bullish for the USD while a lower than expected reading should be taken as negative/bearish for the USD. Learn More: USDJPY EURUSD

S&P Global Services PMI (Nov)

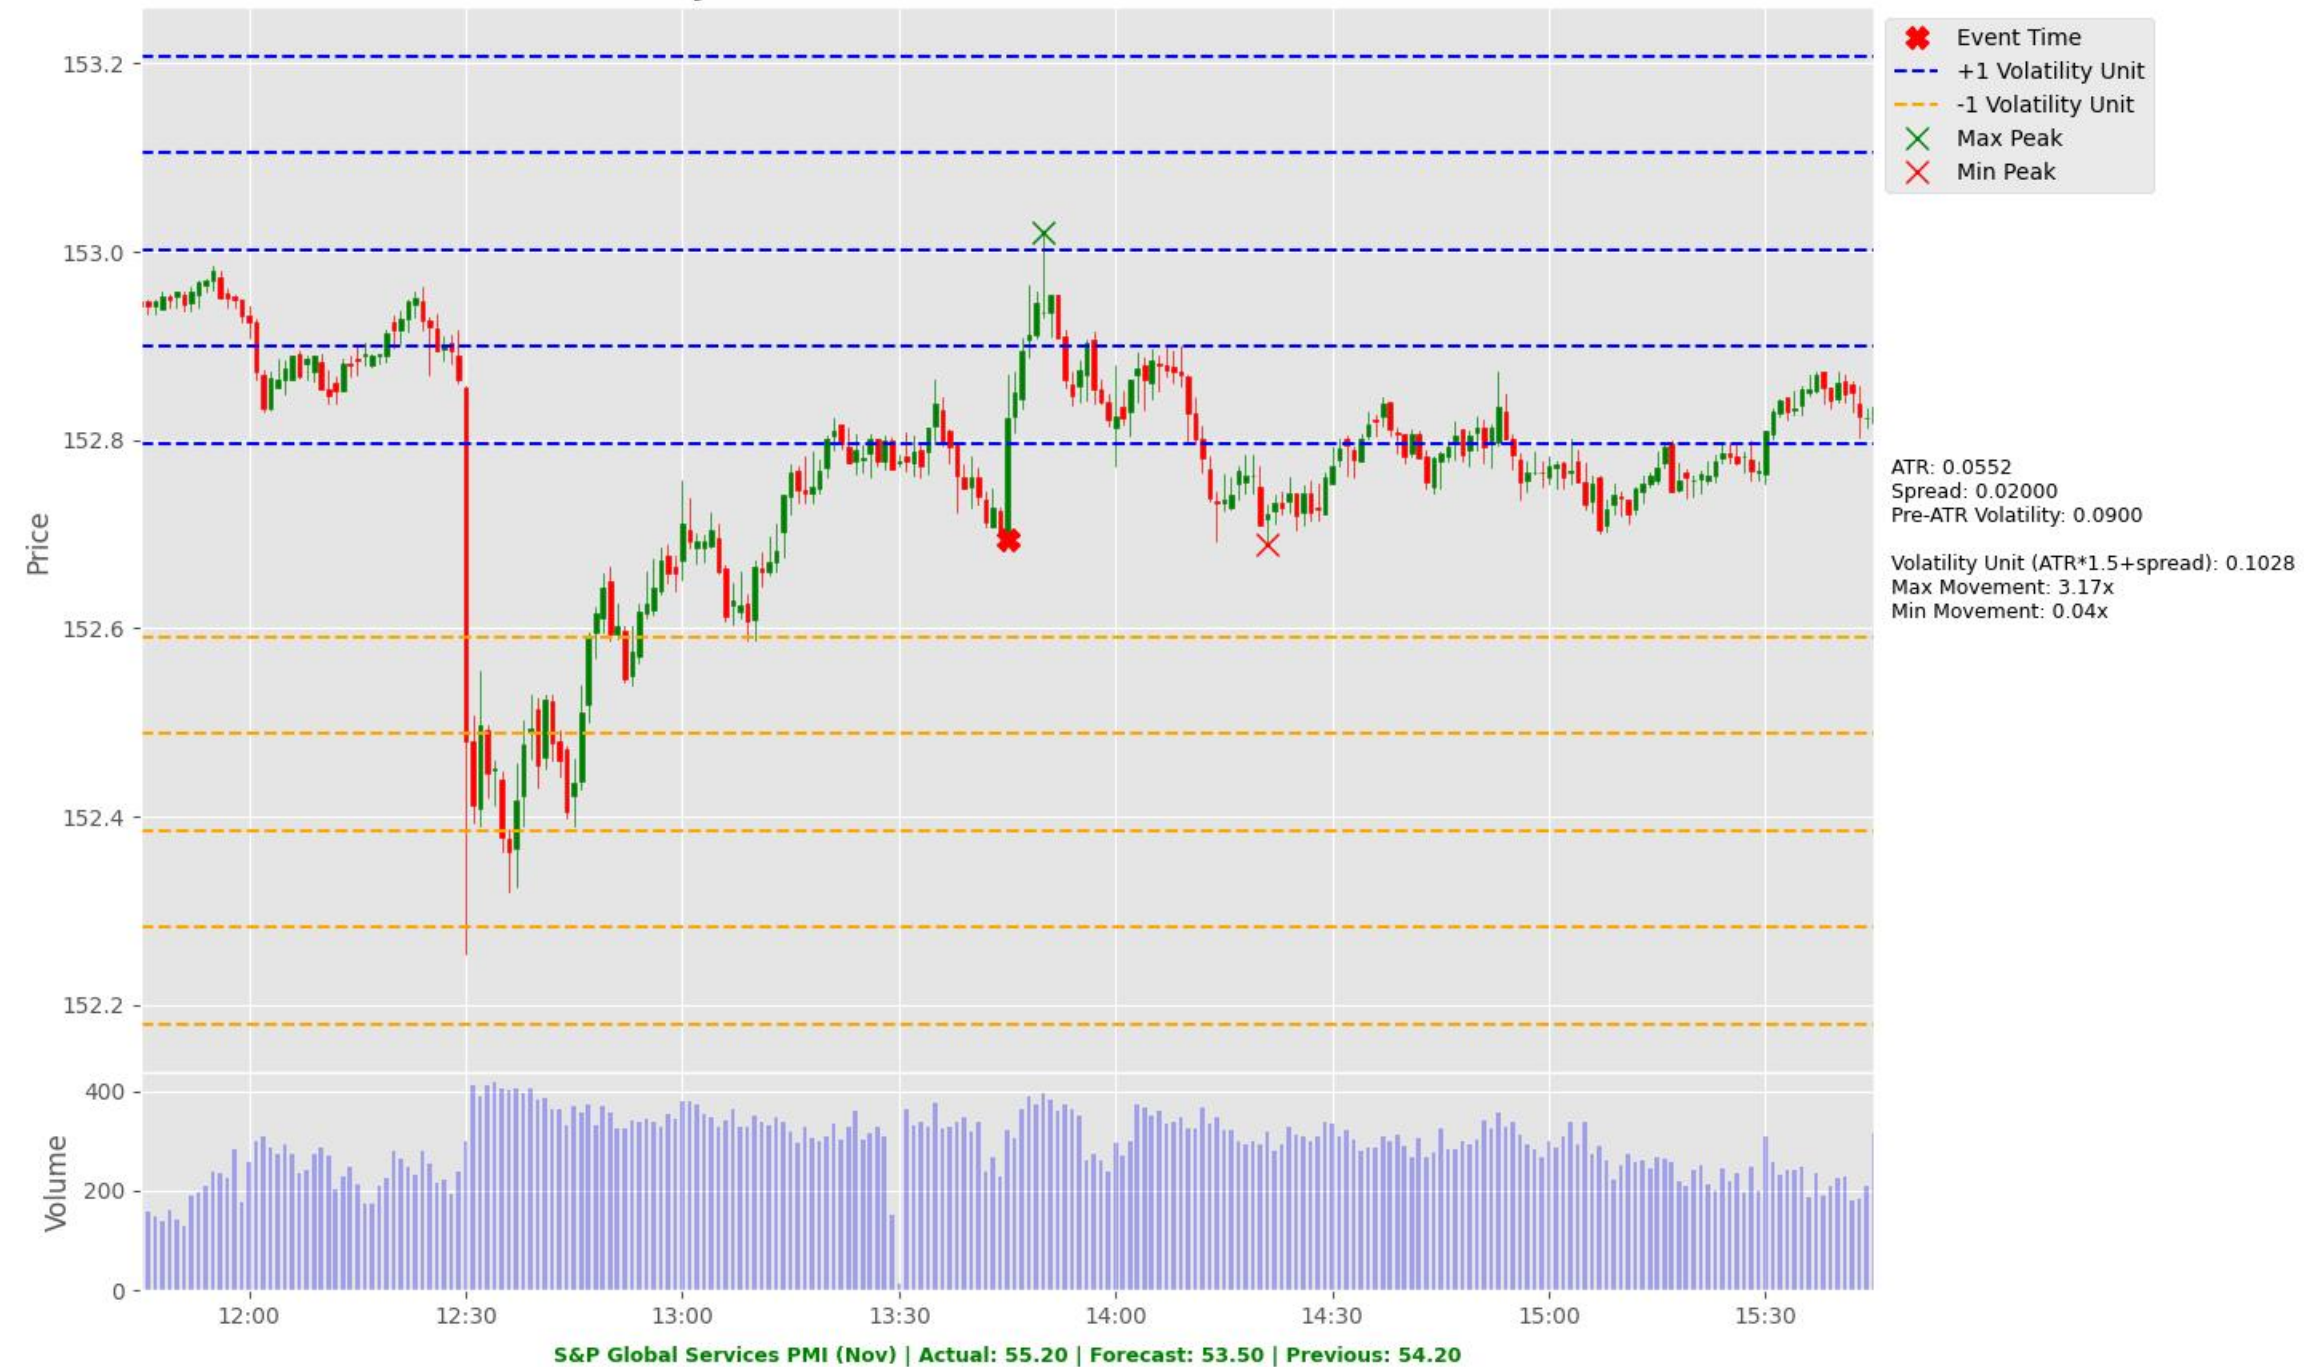

S&P Global Services PMI (Nov)

Event	S&P Global Services PMI (Nov)			Description
Actual:				The S&P Global Services Purchasing Managers' Index (PMI) measures the activity level of purchasing managers in the services sector. It is based on survey responses from senior executives in service sector companies covering activity, new orders, employment, and prices. A PMI reading above 50 represents expansion when compared with the previous month, below 50 represents contraction. A higher than expected reading should be taken as positive/bullish for the USD, while a lower than expected reading should be taken as negative/bearish for the USD. Learn More: USDJPY EURUSD

Important Information

Quantwater Tech Investments Data Release Deck – 16th November 2025

This document is for informational purposes only and does not constitute investment advice, an offer, or a solicitation to buy or sell any securities or financial instruments.

Past performance is not indicative of future results. Investments involve inherent risks, including the possible loss of principal. No representation or warranty, express or implied, is made regarding the accuracy, completeness, or reliability of the information contained herein.

The information in this presentation is derived from publicly available sources and internal analysis as of the date indicated and is subject to change without notice. Quantwater Tech Investments and its affiliates do not undertake any obligation to update or revise this material.

Neither Quantwater Tech Investments nor any of its affiliates, officers, or employees shall be liable for any direct or indirect losses arising from the use of this information. Any misrepresentation is strictly prohibited.

Key Economic & Analytical Concepts

Economic Data Interpretation

- **Forecast Vs. Actual:** Comparing predicted values with released data
- **Previous Reading:** Last reported value
- **Market Impact:** How releases affect financial markets

Average True Range (ATR)

- **Definition:** A technical indicator that measures market volatility
- **Calculations:**
 - Calculate True Range (TR) for each period:
 - $TR = \max [(high - low), abs(high - previous\ close), abs(low - previous\ close)]$
 - $ATR = \text{Simple moving average of TR over N periods (typically 14)}$
- **Interpretation:**
 - Higher ATR = Higher Volatility
 - Lower ATR = Lower Volatility
- **Usage in Our Analysis:**
 - Helps standardize price movements across different market conditions
 - Forms the basis of our Volatility Unit Calculations

Volatility Unit

- **Formula:** $(ATR * multiple) + Spread$ (*multiple is typically 1.5*)
- **Purpose:** Standardizes price movements

Price Movements

- **Max Movement:** Largest upward price move after event
- **Min Movement:** Largest downward price move after event
- Both measured in Volatility Units

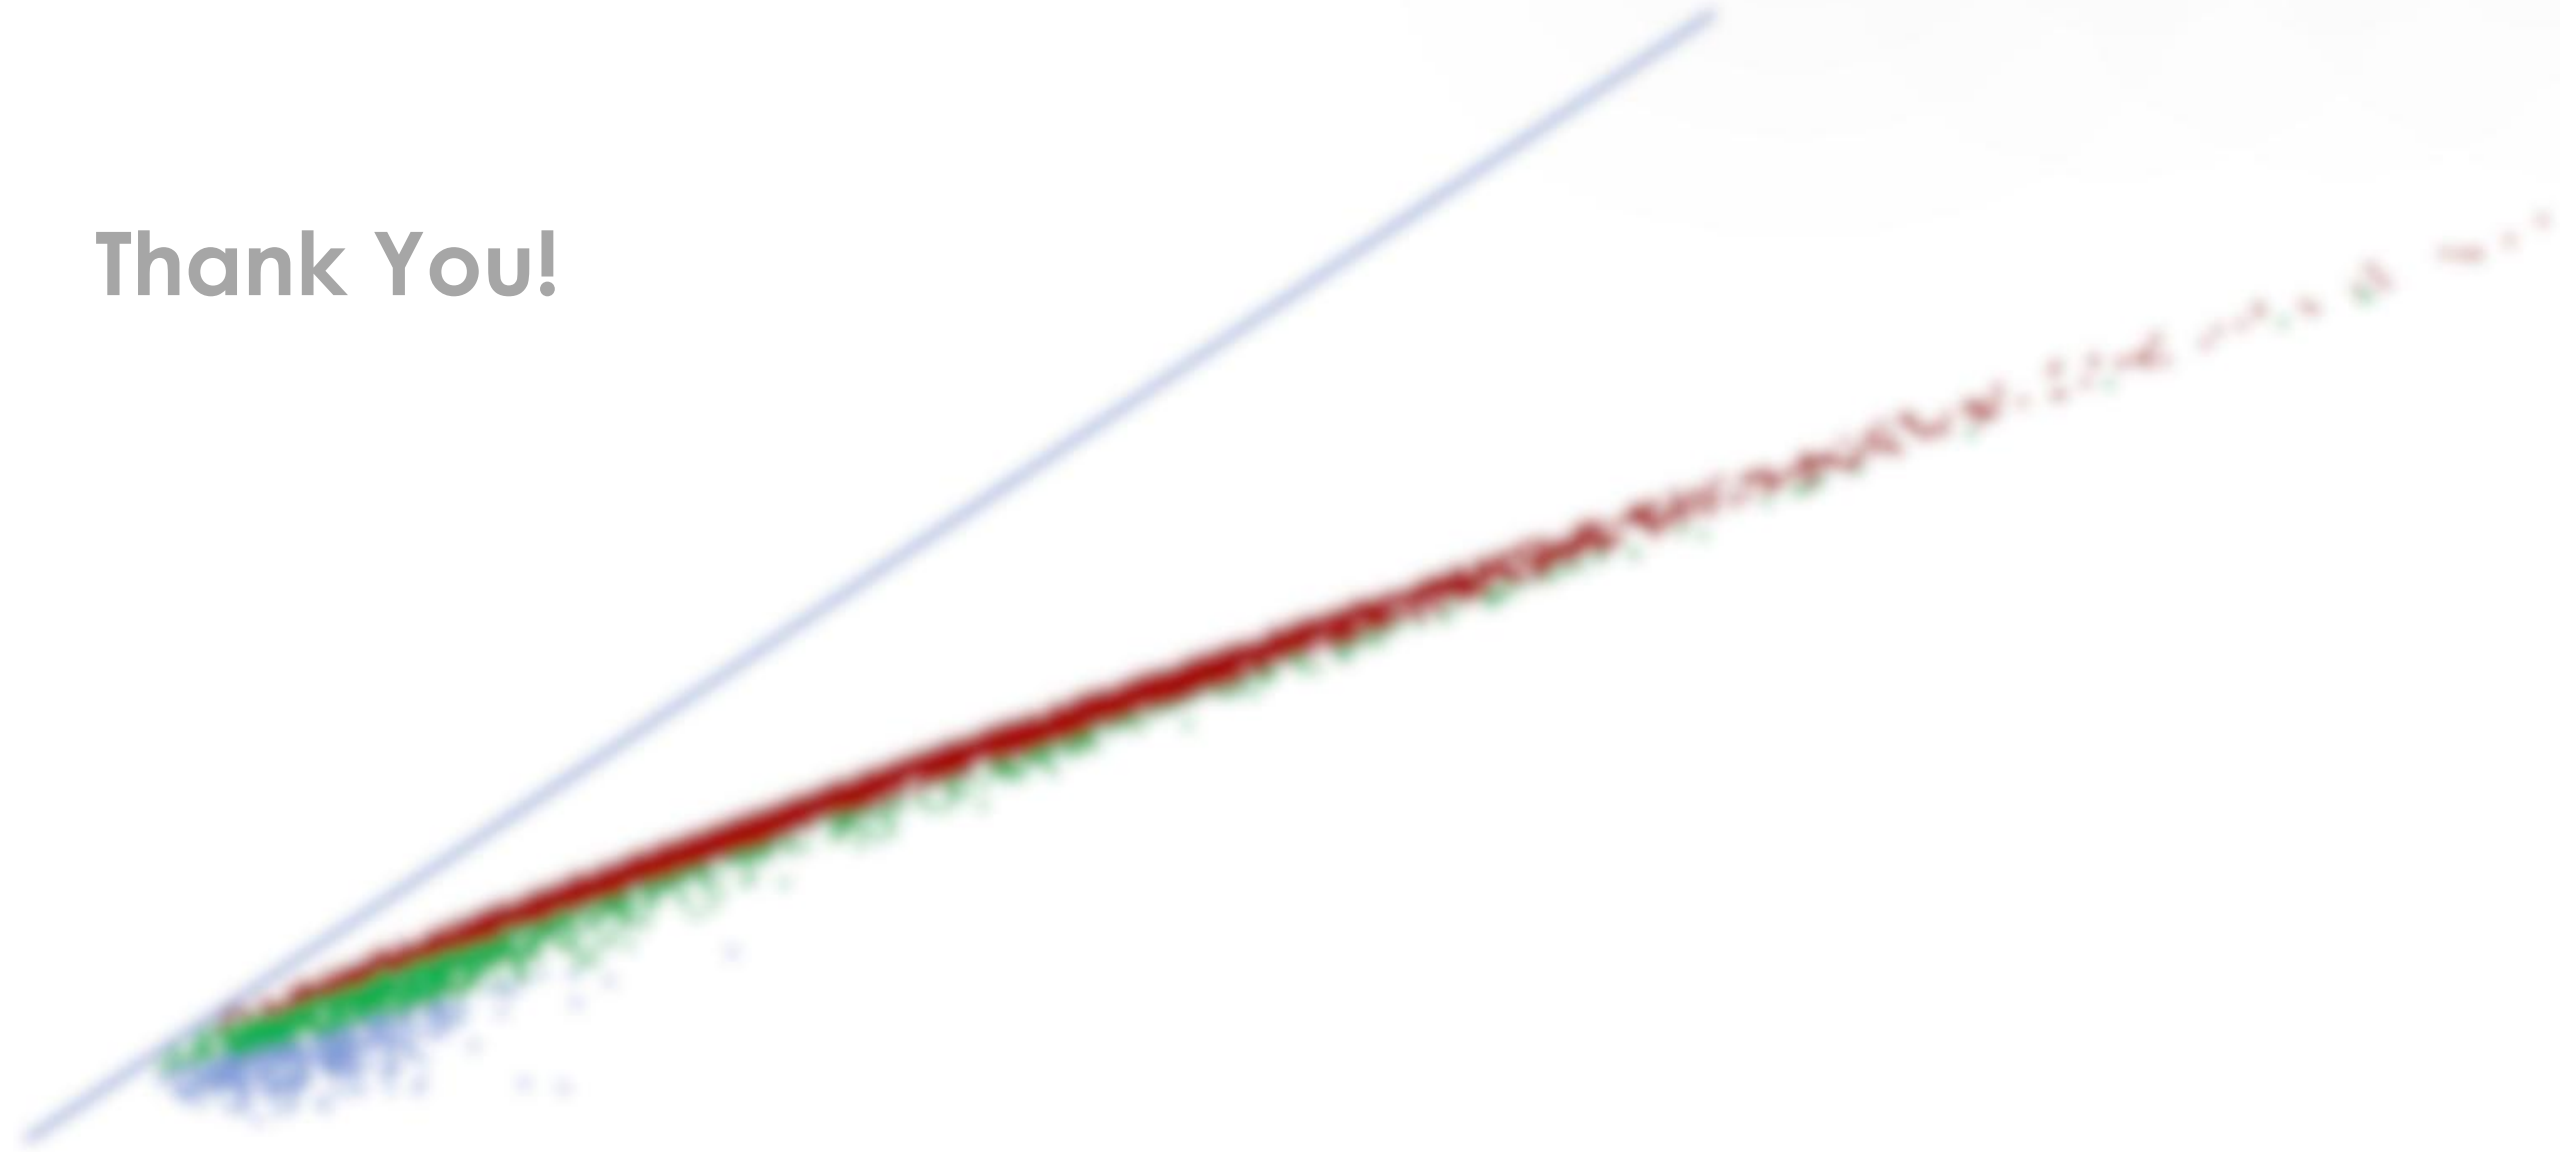

Using This Analysis

- Analyzing volatility across different economic releases helps identify patterns in market reactions.
- This approach allows for evaluating the significance of economic indicators based on their market impact.
- Adhering to standard trading guidelines, the risk amount should not exceed 5% of the trading balance, typically. A risk-reward ratio of 1:1.5x or greater, guided by the win ratio and historical data from this presentation or other estimates, can be used to determine the appropriate risk level, take-profit point, and position size.
- Trade automation on the MT5/MT4 platform can be implemented using the expert advisor linked below, which takes the specified parameters as input.
- An MT5/MT4 account can be accessed through a [brokerage/securities dealer firm](#) or by using a [proprietary \(prop\) trading account](#).*
- **Example:**
 - Volatility analysis of economic releases, such as the CPI event, helps identify patterns in market reactions. For instance, if the CPI event typically results in a minimum movement of 0.5x and a maximum movement of 3x, a stop-loss of 1x and a take-profit of 3x can be strategically applied.
 - Following prudent risk management, the risk per trade should not exceed 5% of the trading balance, typically. For a \$100,000 trading account (max loss amount post which trading is halted), this translates to a \$5,000 stop-loss and a \$15,000 take-profit.
 - The guiding principle is that a win ratio of at least 50% combined with a risk-reward ratio of over 1.5 ensures positive expected cash flow. By limiting risk to 5% of the account balance, potential drawdowns from consecutive losses are minimized, preserving capital and maintaining positive cash flow expectations.
- If you need further assistance, please don't hesitate to contact us.
