Important Information

Quantwater Tech Investments
Data Release Deck – 27th September 2026

This document is for informational purposes only and does not constitute investment advice, an offer, or a solicitation to buy or sell any securities or financial instruments.

Past performance is not indicative of future results. Investments involve inherent risks, including the possible loss of principal. No representation or warranty, express or implied, is made regarding the accuracy, completeness, or reliability of the information contained herein.

The information in this presentation is derived from publicly available sources and internal analysis as of the date indicated and is subject to change without notice. Quantwater Tech Investments and its affiliates do not undertake any obligation to update or revise this material.

Neither Quantwater Tech Investments nor any of its affiliates, officers, or employees shall be liable for any direct or indirect losses arising from the use of this information. Any misrepresentation is strictly prohibited.

Key Economic & Analytical Concepts

Economic Data Interpretation

- **Forecast Vs. Actual**: Comparing predicted values with released data
- **Previous Reading:** Last reported value
- **Market Impact**: How releases affect financial markets

Price Movements

- **Max Movement**: Largest upward price move after event
- **Min Movement**: Largest downward price move after event
- Both measured in Volatility Units

Average True Range (ATR)

- **Definition**: A technical indicator that measures market volatility
- **Calculations**:
  - Calculate True Range (TR) for each period:
    - TR = max [(high - low), abs(high – previous close), abs(low – previous close)]
  - ATR = Simple moving average of TR over N periods (typically 14)
- **Interpretation**:
  - Higher ATR = Higher Volatility
  - Lower ATR = Lower Volatility
- **Usage in Our Analysis**:
  - Helps standardize price movements across different market conditions
  - Forms the basis of our Volatility Unit Calculations

Using This Analysis

- Analyzing volatility across different economic releases helps identify patterns in market reactions.
- This approach allows for evaluating the significance of economic indicators based on their market impact.
- Adhering to standard trading guidelines, the risk amount should not exceed 5% of the trading balance, typically. A risk-reward ratio of 1:1.5x or greater, guided by the win ratio and historical data from this presentation or other estimates, can be used to determine the appropriate risk level, take-profit point, and position size.
- Trade automation on the MT5/MT4 platform can be implemented using the expert advisor linked below, which takes the specified parameters as input.
- An MT5/MT4 account can be accessed through a brokerage/securities dealer firm or by using a proprietary (prop) trading account.*
- **Example:**
  - Volatility analysis of economic releases, such as the CPI event, helps identify patterns in market reactions. For instance, if the CPI event typically results in a minimum movement of 0.5x and a maximum movement of 3x, a stop-loss of 1x and a take-profit of 3x can be strategically applied.
  - Following prudent risk management, the risk per trade should not exceed 5% of the trading balance, typically. For a $100,000 trading account (max loss amount post which trading is halted), this translates to a $5,000 stop-loss and a $15,000 take-profit.
  - The guiding principle is that a win ratio of at least 50% combined with a risk-reward ratio of over 1.5 ensures positive expected cash flow. By limiting risk to 5% of the account balance, potential drawdowns from consecutive losses are minimized, preserving capital and maintaining positive cash flow expectations.
- If you need further assistance, please don't hesitate to contact us.
- **Disclaimer: The links are provided for informational purposes only and connect to third-party websites. We are not affiliated with, nor do we endorse, any of these external sites. Trading carries a significant risk of financial loss. Your risk is your own responsibility, and you should carefully consider your investment objectives and risk tolerance before trading.*

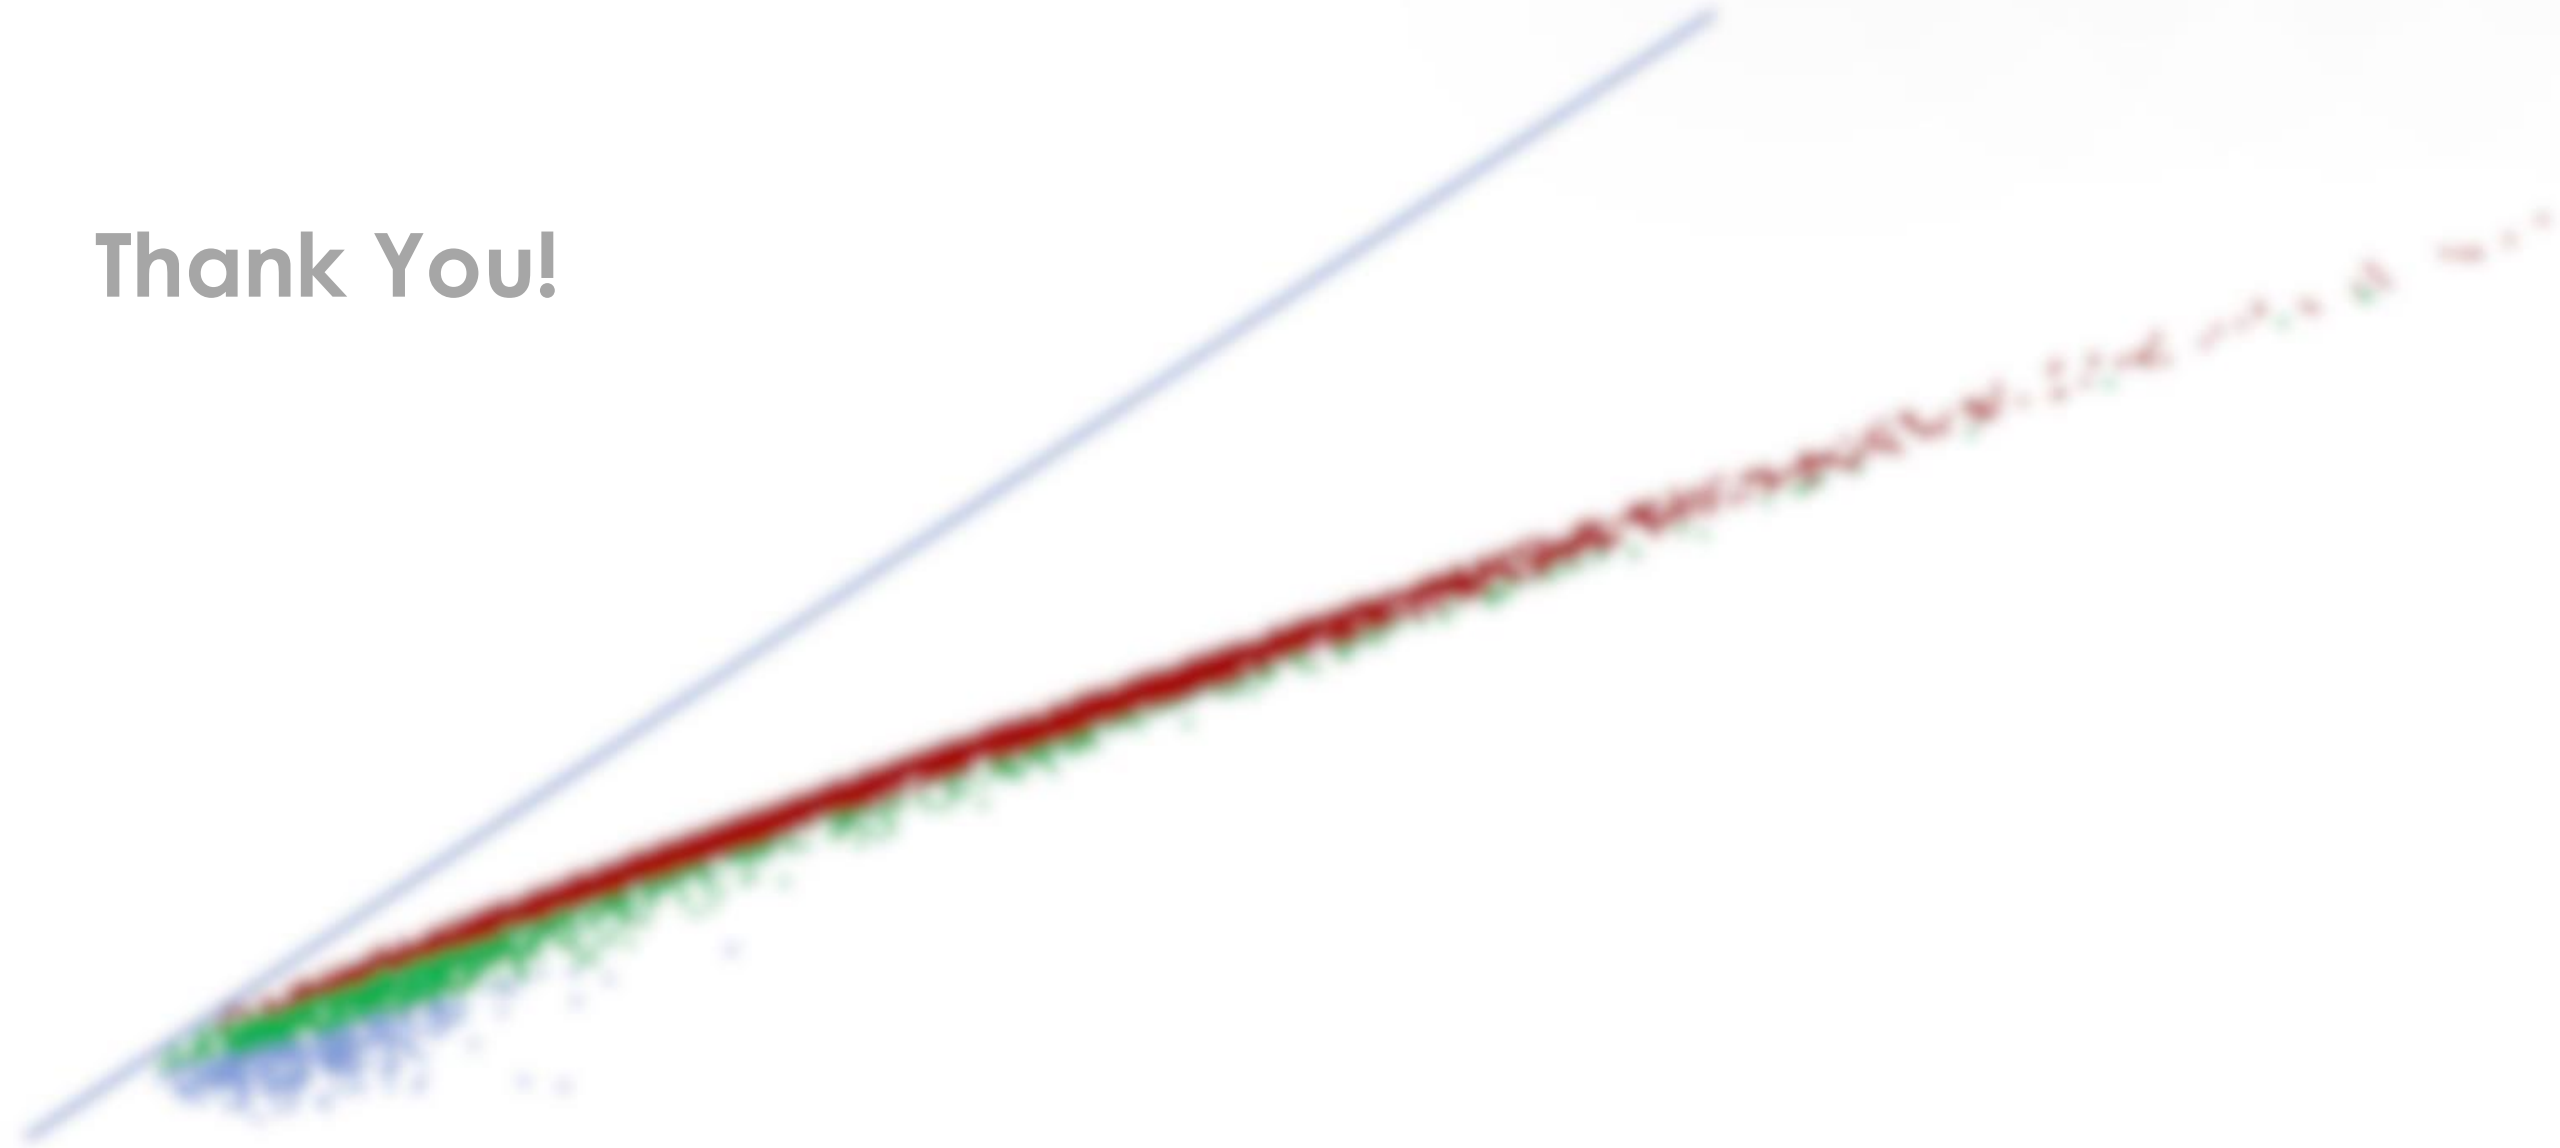

Volatility Unit

- **Formula**: (ATR * *multiple*) + Spread (*multiple is typically 1.5*)
- **Purpose**: Standardizes price movements
